## Packing List

Before you begin operating your PC, please make sure that the following materials are enclosed:

- 1 AEC-VS01 Embedded Controller
- 2 Wallmount Brackets
- 1 Screw Package
- 1 CD-ROM for manual (in PDF format) and drivers
- 1 Phoenix Power Connector

If any of these items should be missing or damaged, please contact your distributor or sales representative immediately.

## Safety & Warranty

1. Read these safety instructions carefully.
2. Keep this user's manual for later reference.
3. Disconnect this equipment from any AC outlet before cleaning. Do not use liquid or spray detergents for cleaning. Use a damp cloth.
4. For pluggable equipment, the power outlet must be installed near the equipment and must be easily accessible.
5. Keep this equipment away from humidity.
6. Put this equipment on a firm surface during installation. Dropping it or letting it fall could cause damage.
7. The openings on the enclosure are for air convection. Protect the equipment from overheating. **DO NOT COVER THE OPENINGS.**
8. Make sure the voltage of the power source is correct before connecting the equipment to the power outlet.
9. Position the power cord so that people cannot step on it. Do not place anything over the power cord.
10. All cautions and warnings on the equipment should be noted.
11. If the equipment is not used for a long time, disconnect it from the power source to avoid damage by transient over-voltage.
12. Never pour any liquid into an opening. This could cause fire or electrical shock.
13. Never open the equipment. For safety reasons, only qualified service personnel should open the equipment.
14. If any of the following situations arises, get the equipment checked by service personnel:
  - a. The power cord or plug is damaged.
  - b. Liquid has penetrated into the equipment.
  - c. The equipment has been exposed to moisture.

- d. The equipment does not work well, or you cannot get it to work according to the user's manual.
  - e. The equipment has been dropped and damaged.
  - f. The equipment has obvious signs of breakage.
15. DO NOT LEAVE THIS EQUIPMENT IN AN ENVIRONMENT WHERE THE STORAGE TEMPERATURE IS BELOW -20°C (-4°F) OR ABOVE 70°C (158°F). IT MAY DAMAGE THE EQUIPMENT.

## FCC

### **Warning!**

This device complies with Part 15 FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received including interference that may cause undesired operation.

### **Caution:**

*There is a danger of explosion if the battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions and your local government's recycling or disposal directives.*

Information**

## 1.1 Introduction

---

AAEON introduces the newest product in for entry level fanless boxer, AEC-VS01, which utilizes the Intel® Atom™ D2550 processor and 4-channel PoE ports for video surveillance applications. With compact, and aluminum case easily for customers install in the customer's own housing, or as a stand-alone application where space is limited and the environment harsh.

With PoE(Power Over Ethernet ) function, customer can easy install their IP Camera anywhere which cable install limitation issue and extra cost for system maintenance.

Also test by 3rd party surveillance software, customers can remote management and maintenance their system.

The AEC-VS01 supports a rich I/O capability, including four serial ports, four USB 2.0 ports, digital I/Os, expand storage, and 4 channel PoE ports, which make AEC-VS01 ideal to integrate, deploy, and manage for system development, and further accelerate time to video surveillance market.

In this era of information explosion, the advertising of consumer products will not be confined to the family television, but will also spread to high-traffic public areas, like department stores, the bus, transportation station, the supermarket etc. The advertising

marketing industry will resort to every conceivable mean to transmit product information to consumers. System integrators will need a multifunction device to satisfy commercial needs for such public advertising.

The AEC-VS01 is a standalone high performance controller designed for long-life operation and with high reliability. It can replace traditional methods and become the mainstream controller for the multimedia entertainment market.

## **1.2 Features**

---

- Intel® Atom™ D2550 1.86 GHz Processor
- Intel® NM10 Express chipset
- USB2.0 x 4
- COM x 4
- Dual Gigabit Ethernet LAN
- DIO x 8
- USB type 4-CH PoE
- Power input: 24~30V
- VGA Output
- Fanless System Design

### 1.3 Specifications

---

#### System

- CPU Intel® Atom™ D2550 1.86 GHz Processor
- Memory DDR3 800/1066 SODIMM x 1, Max. 4GB)
- VGA VGA x 1
- Ethernet Gigabit Ethernet, RJ-45 connector x 2
- Hard Disk Storage 2.5" SATA HDD Bay x 1
- Expansion Mini Card Slot x 1  
DIO x 8  
4-Channel PoE
- LCD/CRT Controller Integrated in Processor, shared system memory by Intel® DVMT Technology
- Solid Storage CFAST™ slot x 1 (w/ cover protection)  
Disk
- Serial Port RS-232/422/485 x 1, RS-232 x 3 (optional x 2)
- USB USB 2.0 x 4
- System Control Power ON/OFF
- LED Indicator Power LED x 1, Hard disk active LED x 1, CFAST™ slot x 1, Antenna hole x 2
- Power Supply DC power input 12V/ DC 24-30V w/ 3-pin terminal block
- OS Support Windows® 7, Linux Fedora Core, Windows® XP

#### **Mechanical and Environmental**

- Construction Aluminum Alloy Chassis

- Color Dark Gray
- Mounting Wallmount
- Dimension 7.76"(W) x 4.02"(H) x 4.80"(D)  
(197 mm x 102 mm x 122 mm)
- Gross Weight 9.9 lb (4.5 kg)
- Net Weight 7.26 lb (3.3 kg)
- Operating Temperature 32°F ~ 113°F (0°C ~ 45°C)
- Storage Temperature 32°F ~ 158°F (0°C ~ 70°C)
- Storage Humidity 5 ~ 95% @ 40°C, non-condensing
- Vibration 1 g rms/ 5~500Hz/ random operation –HDD
- Shock 20 G peak acceleration (11msec. duration) –HDD
- EMC CE/FCC Class A

# Hardware Installation

## 2.1 Dimension and I/O of AEC-VS01

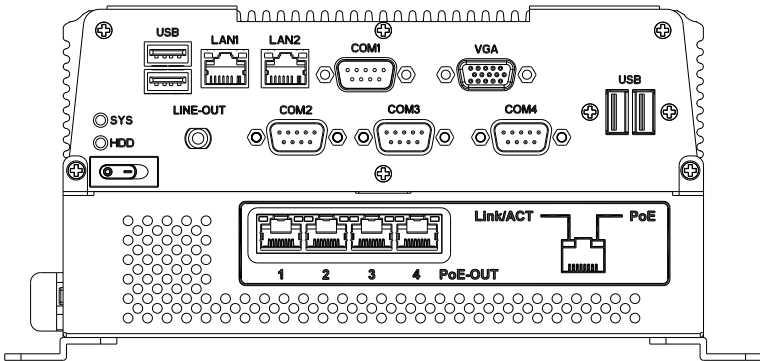

Front View

Rear View

## 2.2 Connectors and Jumpers of The Main Board

### Component Side

Solder Side

## 2.3 List of Jumpers

---

The board has a number of jumpers that allow you to configure your system to suit your application.

The table below shows the function of each of the board's jumpers:

<b>Label</b>	<b>Function</b>
JP1	Auto Power Button Selection
JP2	Clear CMOS
JP3	COM2 RI/+5/+12V Selection
JP4	Touch Screen 4/5/8-wires Mode Selection
JP5	Brightness Control for 2 <sup>nd</sup> LVDS
JP6	2 <sup>nd</sup> LVDS Backlight Bias/PWM Mode Selection
JP7	2 <sup>nd</sup> LVDS Operating Voltage Selection
JP8	2 <sup>nd</sup> LVDS Inverter Voltage Selection
JP9	1 <sup>st</sup> LVDS Inverter Voltage Selection
JP10	1 <sup>st</sup> LVDS Backlight Bias/PWM Mode Selection
JP11	1 <sup>st</sup> LVDS Operating Voltage Selection

## 2.4 List of Connectors

---

The board has a number of connectors that allow you to configure your system to suit your application. The table below shows the function of each board's connectors:

<b>Label</b>	<b>Function</b>
CN1	Front Panel
CN2	External +5VSB Input
CN3	CPU FAN
CN4	+5VSB Output w/ SMBus
CN5	SATA Port
CN6	External 12V Input
CN7	Digital I/O
CN8	Parallel Port
CN9	+5V Output for SATA HDD using
CN10	USB Port #6
CN11	COM Port #6
CN12	USB Port #5
CN13	COM Port #5
CN14	USB Port #4
CN15	USB Port #3
CN16	COM Port #4
CN17	LPC Expansion I/F
CN18	COM Port #3
CN19	COM Port #2
CN20	Touch Screen
CN21	Stereo-R Channel
CN22	2 <sup>nd</sup> LVDS (Dual channel 18/24bit)
CN23	PS/2 Keyboard & Mouse
CN24	2 <sup>nd</sup> LVDS Inverter

CN25	Stereo-L Channel
CN26	1 <sup>st</sup> LVDS Inverter
CN27	1 <sup>st</sup> LVDS (Single channel 18/24bit)
CN28	2 <sup>nd</sup> RJ-45 Ethernet
CN29	1 <sup>st</sup> RJ-45 Ethernet
CN30	USB Port #1 and #2
CN31	Audio Line In/Out and MIC
CN32	CRT/DVI (Configured by manufacturing)
CN33	COM Port #1
CN34	SIM Card Socket
CFD1	CFAST™
PCIE1	Mini Card/ mSATA (Configured by manufacturing)
DIMM1	DDR3 SODIMM Slot

## 2.5 DIO Pin Definition

Pin	Signal	Pin	Signal
1	Port 1	2	Port 2
3	Port 3	4	Port 4
5	Port 5	6	Port 6
7	Port 7	8	Port 8
9	+3.3 Volt.	10	Ground

## 2.6 PoE1~4 Port Pin Definition (MID-SPAN)

Green LED: PoE Power Link  
 Yellow LED: 10/100M Link/Act

Pin	Signal	Pin	Signal
1	Tx+	2	Tx-
3	Rx+	4	48V+
5	48V+	6	Rx-
7	48V-	8	48V-

## 2.7 Hard Disk Drive Installation

---

Step 1: Unfasten two screws of the safety bracket

Step 2: Push to open the HDD cover

Step 3: Insert the HDD to the HDD slot

Step 4: Close the HDD cover and push to lock the cover

Step 5: Fasten two screws of the safety bracket to lock the HDD cover

## 2.8 RAM Installation

Step 1: Loosen the three screws of the front case

Step 2: Loosen the three screws of the rear case

Step 3: Insert the RAM to the memory slot

Step 4: Press the RAM and make sure that it has been inserted properly. P.S. If you are going to remove the RAM, you have to release the two latches on two sides of the memory slot.

## 2.9 CFast Card Installation

Step 1: Loosen the two screws to release the baffle board on CFast slot

Step 2: Insert the CFast Card to the CFast slot

## 2.10 Wallmount Installation

Step 1: Get the two brackets and four screws ready

Step 2: Fasten the brackets with the four screws.

Chapter

3

**AMI  
BIOS Setup**

### 3.1 System Test and Initialization

---

These routines test and initialize board hardware. If the routines encounter an error during the tests, you will either hear a few short beeps or see an error message on the screen. There are two kinds of errors: fatal and non-fatal. The system can usually continue the boot up sequence with non-fatal errors.

#### **System configuration verification**

These routines check the current system configuration against the values stored in the CMOS memory. If they do not match, the program outputs an error message. You will then need to run the BIOS setup program to set the configuration information in memory.

There are three situations in which you will need to change the CMOS settings:

1. You are starting your system for the first time
2. You have changed the hardware attached to your system
3. The CMOS memory has lost power and the configuration information has been erased.

The AEC-VS01 CMOS memory has an integral lithium battery backup for data retention. However, you will need to replace the complete unit when it runs down.

## 3.2 AMI BIOS Setup

---

AMI BIOS ROM has a built-in Setup program that allows users to modify the basic system configuration. This type of information is stored in battery-backed CMOS RAM so that it retains the Setup information when the power is turned off.

### Entering Setup

Power on the computer and press <Del> or <F2> immediately. This will allow you to enter Setup.

### Main

Set the date, use tab to switch between date elements.

### Advanced

Advanced BIOS Features Setup including TPM, ACPI, etc.

### Chipset

Host bridge parameters.

### Boot

Enables/disable quiet boot option.

### Security

Set setup administrator password.

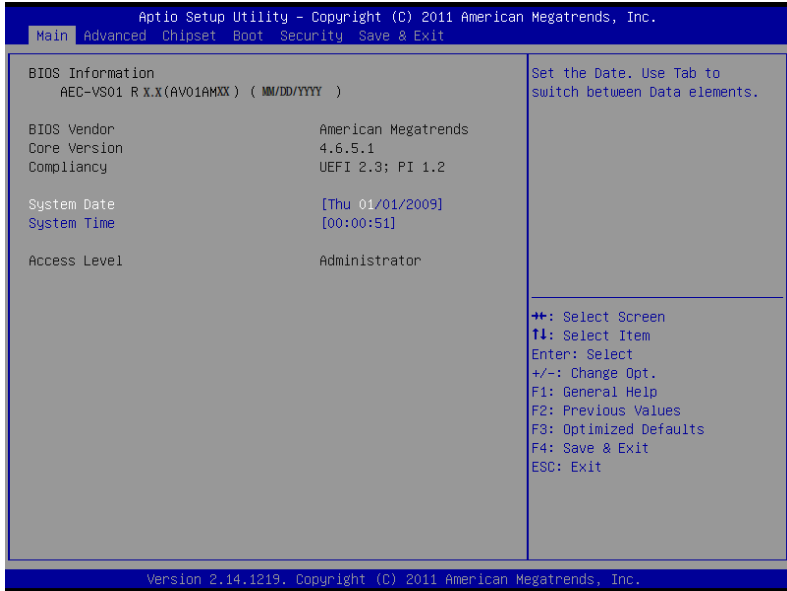

### Save&Exit

Exit system setup after saving the changes.

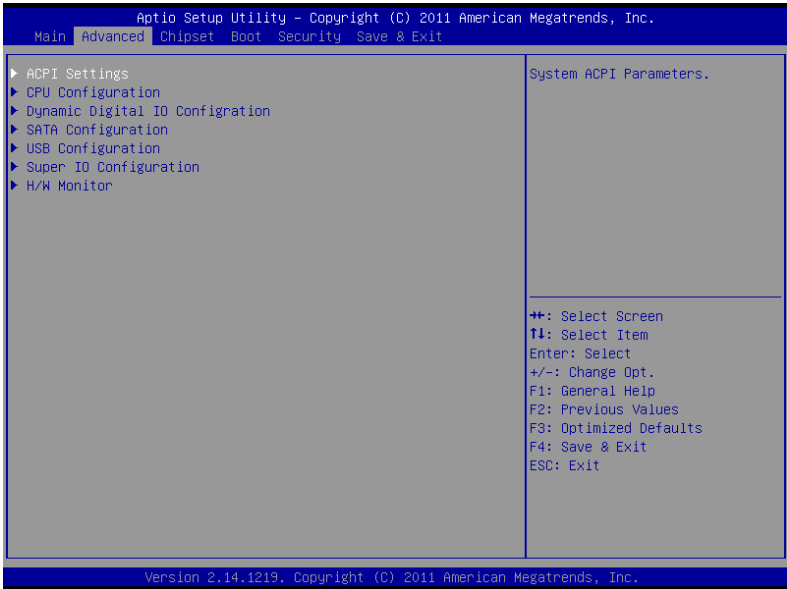

## BIOS Setup Menu

Press '*Delete*' Key to enter Setup

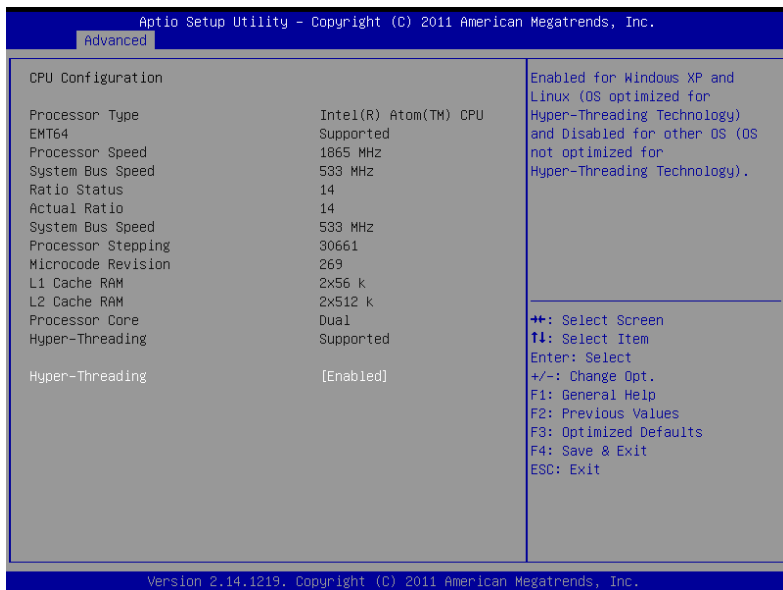

### Main

Advanced

## ACPI Settings

### Options summary:

Suspend mode	Suspend Disabled	
	S1 (CPU Stop Clock)	
	S3 (Suspend to RAM)	Optimal Default, Failsafe Default
Select the ACPI state used for System Suspend		

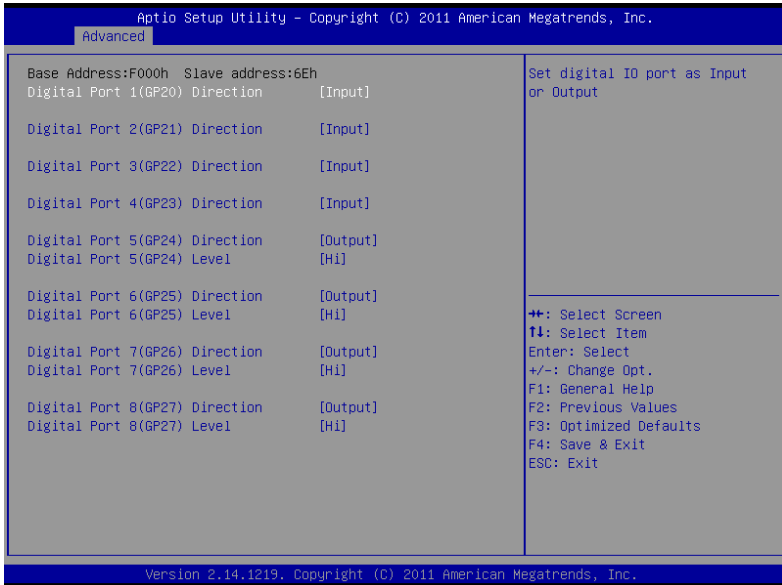

### CPU Configuration

Options summary:

Hyper-Threading	Disabled	Optimal Default, Failsafe Default
	Enabled	
En/Disable CPU Hyper-Threading function		

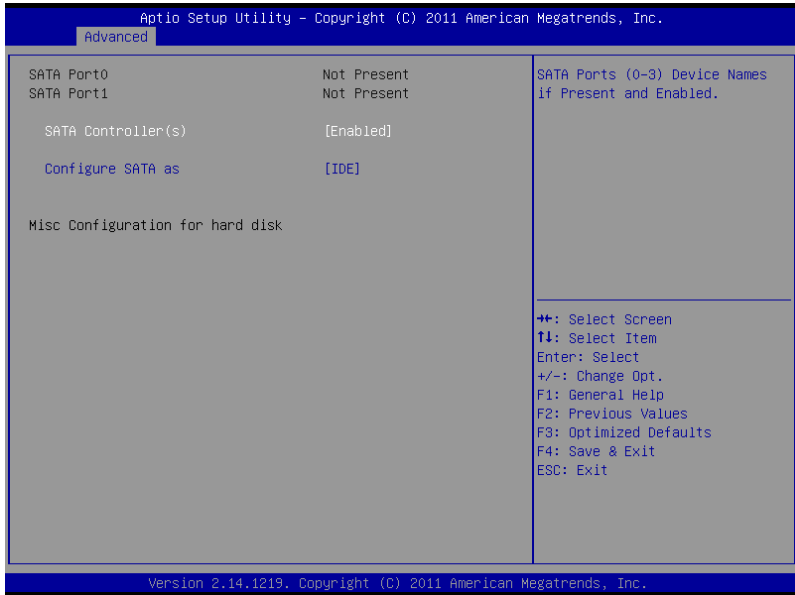

### Dynamic Digital IO Configuration

#### Options summary:

Digital Port	Input	
Direction	Output	
Set digital IO port as Input or Output		
Digital Port Level	Hi	
	Lo	
Set digital IO level as High or Low		

## SATA Configuration

### Options summary:

SATA Controller(s)	Enable	Default
	Disable	
SATA Ports (0-3) Device Names if present and Enable		
Configure SATA as	IDE	Default
	AHCI	
IDE: Configure SATA controllers as legacy IDE		
AHCI: Configure SATA controllers to operate in AHCI mode		

## USB Configuration

### Options summary:

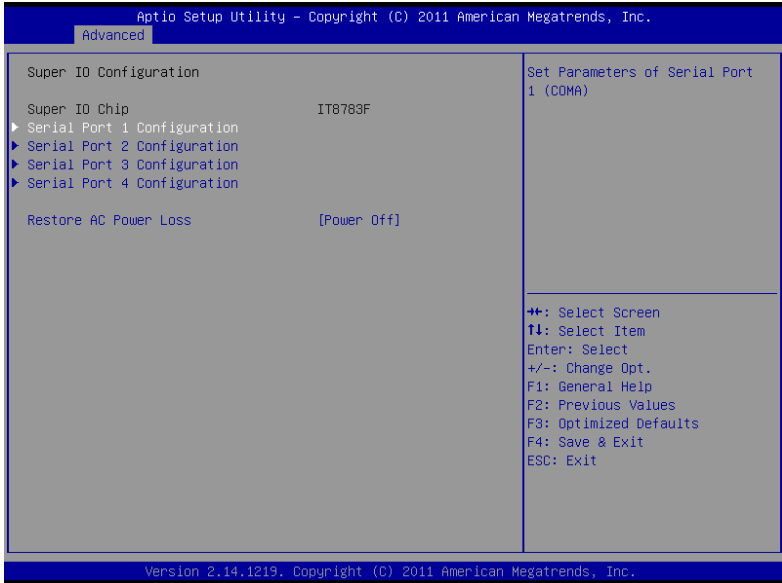

Legacy USB Support	Enabled	Optimal Default, Failsafe Default
	Disabled	
	Auto	
Enables BIOS Support for Legacy USB Support. When enabled, USB can be functional in legacy environment like DOS. AUTO option disables legacy support if no USB devices are connected		
Device Name (Emulation Type)	Auto	Optimal Default, Failsafe Default

	Floppy	
	Forced FDD	
	Hard Disk	
	CDROM	

If Auto. USB devices less than 530MB will be emulated as Floppy and remaining as Floppy and remaining as hard drive. Forced FDD option can be used to force a HDD formatted drive to boot as FDD(Ex. ZIP drive)

## Security

### Change User/Supervisor Password

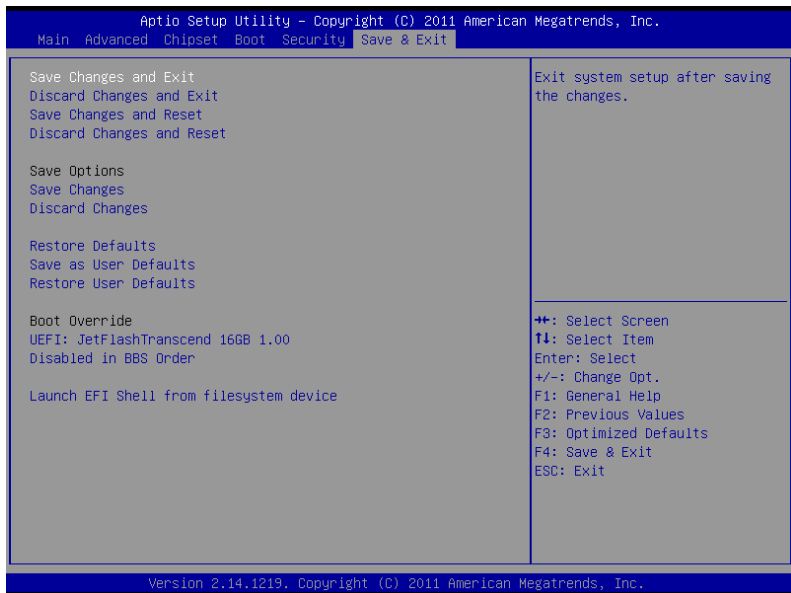

You can install a Supervisor password, and if you install a supervisor password, you can then install a user password. A user password does not provide access to many of the features in the Setup utility.

If you highlight these items and press Enter, a dialog box appears which lets you enter a password. You can enter no more than six letters or numbers. Press Enter after you have typed in the password. A second dialog box asks you to retype the password for confirmation. Press Enter after you have retyped it correctly. The password is required at boot time, or when the user enters the Setup utility.

### Removing the Password

Highlight this item and type in the current password. At the next dialog box press Enter to disable password protection.

### Save & Exit

Chapter

4

**Driver  
Installation**

The AEC-VS01 comes with a DVD-ROM that contains all drivers and utilities that meet your needs.

***Follow the sequence below to install the drivers:***

Step 1 – Install Chipset Driver

Step 2 – Install VGA Driver

Step 3 – Install LAN Driver

Step 4 – Install Audio Driver

Step 5 – Install AHCI Driver

Step 6 – Install Serial Port Driver (Optional)

Step 7 – Install PER-T263 Driver

## 4.1 Installation:

---

Insert the AEC-VS01 DVD-ROM into the DVD-ROM drive, and then install the drivers from Step 1 to Step 7 in order.

### Step 1 – Install Chipset Driver

1. Click on the **STEP1-CHIPSET** folder and select the OS folder your system is
2. Double click on the **.exe** located in each OS folder
3. Follow the instructions that the window shows
4. The system will help you install the driver automatically

### Step 2 – Install VGA Driver

#### For Windows® 7

1. Click on the **STEP2-VGA** folder and select the folder of **WIN7\_32**
2. Double click on the **Setup.exe** file
3. Follow the instructions that the window shows
4. The system will help you install the driver automatically

#### For Windows® XP

1. Click on the **STEP2-VGA** folder and select the folder of **WINXP\_32**
2. Double click on the **WindowsDriverSETUP.cmd**
3. Follow the instructions that the window shows
4. The system will help you install the driver automatically

### Step 3 – Install LAN Driver

1. Click on the **STEP3-LAN** folder and select the OS folder your system is
2. Double click on the **setup.exe** file located in each OS folder
3. Follow the instructions that the window shows
4. The system will help you install the driver automatically

### Step 4 – Install Audio Driver

1. Click on the **STEP4-AUDIO** folder and select the OS folder your system is
2. Double click on the **Setup.exe** file located in each OS folder
3. Follow the instructions that the window shows
4. The system will help you install the driver automatically

### Step 5 – Install AHCI Driver

Please refer to Appendix D AHCI Settings

### Step 6 – Install Serial Port Driver (Optional)

1. Click on the **STEP6-Serial Port Driver (Optional)** folder and select the OS folder your system is
2. Double click on the **Serial Patch v1.0.1\_Eng.exe** file located in each OS folder
3. Follow the instructions that the window shows
4. The system will help you install the driver automatically

**Note:** If the OS is Chinese version, you may click on **Serial Patch v1.0.1. exe** file located in each OS folder.

#### Step 7 – Install PER-T263 Driver

1. Click on the **STEP7-PER-T263** folder and double click on the **Setup.exe** file
2. Follow the instructions that the window shows
3. The system will help you install the driver automatically

# Programming the Watchdog Timer

## A.1 Programming

AEC-VS01 utilizes the ITE 8783 chipset as its watchdog timer controller. Below are the procedures to complete its configuration and the AAeon initial watchdog timer program is also attached based on which you can develop customized program to fit your application.

### Configuring Sequence Description

After the hardware reset or power-on reset, the ITE 8783 enters the normal mode with all logical devices disabled except KBC. The initial state (enable bit) of this logical device (KBC) is determined by the state of pin 121 (DTR1#) at the falling edge of the system reset during power-on reset.

There are three steps to complete the configuration setup: (1) Enter the MB PnP Mode; (2) Modify the data of configuration registers; (3)

Exit the MB PnP Mode. Undesired result may occur if the MB PnP Mode is not exited normally.

### (1) Enter the MB PnP Mode

To enter the MB PnP Mode, four special I/O write operations are to be performed during Wait for Key state. To ensure the initial state of the key-check logic, it is necessary to perform four write operations to the Special Address port (2EH). Two different enter keys are provided to select configuration ports (2Eh/2Fh) of the next step.

	Address Port	Data Port
87h, 01h, 55h, 55h:	2Eh	2Fh

### (2) Modify the Data of the Registers

All configuration registers can be accessed after entering the MB PnP Mode. Before accessing a selected register, the content of Index 07h must be changed to the LDN to which the register belongs, except some Global registers.

### (3) Exit the MB PnP Mode

Set bit 1 of the configure control register (Index=02h) to 1 to exit the MB PnP Mode.

## WatchDog Timer Configuration Registers

LDN	Index	R/W	Reset	Configuration Register or Action
All	02h	W	NA	Configure Control

07h	71h	R/W	00h	Watch Dog Timer Control Register
07h	72h	R/W	001s0000b	Watch Dog Timer Configuration Register
07h	73h	R/W	38h	Watch Dog Timer Time-out Value (LSB) Register
07h	74h	R/W	00h	Watch Dog Timer Time-out Value (MSB) Register

### Configure Control (Index=02h)

This register is write only. Its values are not sticky; that is to say, a hardware reset will automatically clear the bits, and does not require the software to clear them.

Bit	Description
7-2	<b>Reserved</b>
1	Returns to the "Wait for Key" state. This bit is used when the configuration sequence is completed.
0	Resets all logical devices and restores configuration registers to their power-on states.

### Watch Dog Timer 1, 2, 3 Control Register (Index=71h,81h,91h Default=00h)

Bit	Description
7	<b>WDT Timeout Enable(WTE)</b> 1: Disable. 0: Enable.
6	<b>WDT Reset upon Mouse Interrupt(WRKMI)</b> 0: Disable. 1: Enable.
5	<b>WDT Reset upon Keyboard Interrupt(WRKBI)</b> 0: Disable. 1: Enable.
4	<b>Reserved</b>
3-2	<b>Reserved</b>
1	<b>Force Time-out(FTO)</b> This bit is self-clearing.
0	<b>WDT Status(WS)</b> 1: WDT value reaches 0. 0: WDT value is not 0.

### Watch Dog Timer 1, 2, 3 Configuration Register (Index=72h,

**82h, 92h Default=001s0000b)**

Bit	Description
7	<b>WDT Time-out Value Select 1 (WTVS)</b> 1: Second 0: Minute
6	<b>WDT Output through KRST (Pulse) Enable(WOKE)</b> 1: Enable 0: Disable
5	<b>WDT Time-out value Extra select(WTVES)</b> 1: 64ms x WDT Timer-out value (default = 4s) 0: Determined by WDT Time-out value select 1 (bit 7 of this register)
4	<b>WDT Output through PWROK (Pulse) Enable(WOPE)</b> 1: Enable 0: Disable During LRESET#, this bit is selected by JP7 power-on strapping option
3-0	<b>Select interrupt level<sup>Note1</sup> for WDT(SIL)</b>

**Watch Dog Timer 1,2,3 Time-Out Value (LSB) Register  
(Index=73h,83h,93h, Default=38h)**

Bit	Description
7-0	<b>WDT Time-out Value 7-0(WTV)</b>

**Watch Dog Timer 1,2,3 Time-Out Value (MSB) Register  
(Index=74h,84h,94h Default=00h)**

Bit	Description
7-0	<b>WDT Time-out Value 15-8(WTV)</b>

## B.4 DMA Channel Assignments

- 4 Direct memory access (DMA)
- 4 Direct memory access controller

Appendix

C

**Digital I/O**

## C.1 Digital I/O

---

The F75111 provides one serial access interface, I2C Bus, to read/write internal registers. The address of Serial Bus is 0x6E (0110\_1110)

The related register for configuring DIO is list as follows:

### Configuration and Control Register-Index 01h

Power-on default [7:0]=0000\_1000b

Bit	Name	R/W	PWR	Description
7	INIT	R/W	VSB3V	Software reset for all registers including Test Mode registers. Users use only.
6	Reserved	R/W	VSB3V	
5	EN_WDT10	R/W	VSB3V	Enable Reset Out. If set to 1, enable WDTOUT10# output. Default is disable.
4	Reserved	R/W	VSB3V	
3	Reserved	R/W	VSB3V	
2	Reserved	R/W	VSB3V	
1	SMART_P OWR_MAG EMENT	R/W	VSB3V	Set this bit to 1 will enable auto power down mode, when all function are idle then 20ms the chip will auto power down, it will wakeup when GPIO state change or read write register
0	SOFT_PO WR_DOW N	R/W	VSB3V	Set this bit to 1 will power down all of the analog block and stop internal clock, write 0 to clear this bit or when GPIO state change will auto clear this bit to 0.

### GPIO2x Output Control Register-Index 20h

Power-on default [7:0]=0000\_0000b

Bit	Name	R/W	PWR	Description
7	GP27_OCTL	R/W	VSB3V	GPIO 27 output control. Set to 1 for output function. Set to 0 for input function (default).
6	GP26_OCTL	R/W	VSB3V	GPIO 26 output control. Set to 1 for output function. Set to 0 for input function (default).
5	GP25_OCTL	R/W	VSB3V	GPIO 25 output control. Set to 1 for output function. Set to 0 for input function (default).
4	GP24_OCTL	R/W	VSB3V	GPIO 24 output control. Set to 1 for output function. Set to 0 for input function (default).
3	GP23_OCTL	R/W	VSB3V	GPIO 23 output control. Set to 1 for output function. Set to 0 for input function (default).
2	GP22_OCTL	R/W	VSB3V	GPIO 22 output control. Set to 1 for output function. Set to 0 for input function (default).
1	GP21_OCTL	R/W	VSB3V	GPIO 21 output control. Set to 1 for output function. Set to 0 for input function (default).
0	GP20_OCTL	R/W	VSB3V	GPIO 20 output control. Set to 1 for output function. Set to 0 for input function (default).

### GPIO2x Output Data Register-Index 21h

Power-on default [7:0]=0000\_0000b

Bit	Name	R/W	PWR	Description
7	GP27_ODATA	R/W	VSB3V	GPIO 27 output data.
6	GP26_ODATA	R/W	VSB3V	GPIO 26 output data.
5	GP25_ODATA	R/W	VSB3V	GPIO 25 output data.

4	GP24_ODA TA	R/W	VSB3V	GPIO 24 output data.
3	GP23_ODA TA	R/W	VSB3V	GPIO 23 output data.
2	GP22_ODA TA	R/W	VSB3V	GPIO 22 output data.
1	GP21_ODA TA	R/W	VSB3V	GPIO 21 output data.
0	GP20_ODA TA	R/W	VSB3V	GPIO 20 output data.

### GPIO2x Input Status Register-Index 22h

Power-on default [7:0]=xxxx\_xxxx

Bit	Name	R/W	PWR	Description
7	GP27_PST S	RO	VSB3V	Read the GPIO27 data on the pin.
6	GP26_PST S	RO	VSB3V	Read the GPIO26 data on the pin.
5	GP25_PST S	RO	VSB3V	Read the GPIO25 data on the pin.
4	GP24_PST S	RO	VSB3V	Read the GPIO24 data on the pin.
3	GP23_PST S	RO	VSB3V	Read the GPIO23 data on the pin.
2	GP22_PST S	RO	VSB3V	Read the GPIO22 data on the pin.
1	GP21_PST S	RO	VSB3V	Read the GPIO21 data on the pin.
0	GP20_PST S	RO	VSB3V	Read the GPIO20 data on the pin.

The following is a sample code for 8 input

```
.MODEL SMALL
```

```
.CODE
```

begin:

```

mov  cl,01h
mov  al,80h
call CT_I2CWriteByte
call Delay5ms

```

```

mov al,00h

# AHCI Setting

## D.1 Setting AHCI

---

OS installation to setup AHCI Mode.

Step 1: Copy the files below from “Driver CD -> **STEP5-AHCI\WIN7\_32\VF6**

**Install Floppy Create for 32 and 64 bit Windows” to Disk**

Step 2: Connect the USB Floppy to the board

Step 3: Setup OS

Step 4: Press "F6"

## Step 5: Choose "S"

## Step 6: Choose "Intel(R) NM10 Express Chipset"

Step 7: It will show the model number you select and then press “ENTER

Step 8: Setup is loading files
