Packing List

Before you begin installing your card, please make sure that the following materials have been shipped:

- DVD-ROM for manual (in PDF format) and drivers
- ETX-A55E Module

If any of these items are missing or damaged, please contact your distributor or sales representative immediately.

China RoHS Requirements
产品中有毒有害物质或元素名称及含量

AAEON Main Board/ Daughter Board/ Backplane

部件名称	有毒有害物质或元素					
	铅 (Pb)	汞 (Hg)	镉 (Cd)	六价铬 (Cr(VI))	多溴联苯 (PBB)	多溴二苯醚 (PBDE)
印刷电路板 及其电子组件	×	○	○	○	○	○
外部信号 连接器及线材	×	○	○	○	○	○
<p>O: 表示该有毒有害物质在该部件所有均质材料中的含量均在 SJ/T 11363-2006 标准规定的限量要求以下。</p> <p>X: 表示该有毒有害物质至少在该部件的某一均质材料中的含量超出 SJ/T 11363-2006 标准规定的限量要求。</p> <p>备注: 此产品所标示之环保使用期限, 系指在一般正常使用状况下。</p>

**General
Information**

1.1 Introduction

This User's Manual contains all the essential information, such as detailed descriptions and explanations on the product's hardware and software features (if any), its specifications, dimensions, jumper/connector settings/definitions, and driver installation instructions (if any), to facilitate users in setting up their product.

Users may refer to the AAEON.com for the latest version of this document.

1.2 Features

- AMD G-Series T-16R/T56N Processor
- A55E Chipset
- 204-pin DDR3L 1066/1333 SODIMM Memory (up to 8 GB for Windows® 7 64-bit)
- 10/100 Ethernet x 1
- CRT, 18/24-bit Dual-Channel LVDS
- SATA x 2, PATA x 2, PCI x 4, SMBus x 5, PCI x 4, I2C
- 8/16-bit ISA
- USB 2.0 x 4, COM x 2

1.3 Specifications

System

Form Factor	ETX
Processor	AMD G-Series T16R Single-core 615 MHz AMD G-Series T56N Dual-core 1.65 GHz
System Memory	204-pin DDR3L 1066/1333 MHz SODIMM up to 8 GB
Chipset	AMD A55E
Ethernet	Realtek® for 10/100 Base-TX
BIOS	AMI UEFI BIOS
Wake On LAN	Yes
Watchdog Timer	Super I/O
H/W Status Monitoring	Super I/O
Expansion Interface	32-bit PCI x 4 SMBus x 1 I2C x 1 8/16-bit ISA
Power Requirement	DC 5V
Power Consumption (Typical)	10.7 W (T16R)

	24.2 W (T56N)
Board Size	ETX, 114 x 95mm (4.5" x 3.74")
Gross Weight	0.2 kg (1.4 lb)
Operating Temperature	0 °C ~ 60 °C (32 °F ~ 140 °F)
Storage Temperature	-20°C ~ 70°C (-4°F ~ 158°F)
Operation Humidity	10 ~ 80% Relative Humidity, Non-Condensing
Display	
Chipset	AMD G-Series Integrated Graphics Engine
Memory	Shared Memory: 256 MB/ UMA
Resolution	CRT up to 1920 x 1200 LVDS up to 1920 x 1200
LCD Interface	18/24-bit Dual-Channel LVDS
I/O	
Storage	PATA x 2 (supports 2 devices) SATA 6.0 Gb/s x 2
USB	USB 2.0 x 4
Serial Port	RS-232 x 2
D/I/O	-

PS/2 Port

PS/2 Keyboard x 1

Mouse x 1

Audio

HD Audio x 1

**Quick
Installation
Guide**

2.1 Safety Precautions

Warning!

Always completely disconnect the power cord from your board whenever you are working on it. Do not make connections while the power is on, because a sudden rush of power can damage sensitive electronic components.

Caution!

Always ground yourself to remove any static charge before touching the board. Modern electronic devices are very sensitive to static electric charges. Use a grounding wrist strap at all times. Place all electronic components on a static-dissipative surface or in a static-shielded bag when they are not in the chassis

2.4 List of Connectors

The board has a number of connectors that allow you to configure your system to suit your application.

The table below shows the function of each of the board's jumpers:

Label	Function
CN1	RTC Battery Connector
CN2	BIOS SPI Rom Flash Connector
CN4	FAN Connector
CN5	SATA Connector
CN6	SATA Connector
CN7	LPC Debug Port Connector
X1A	ETX - X1 Connector
X1B	ETX - X2 Connector
X1C	ETX - X3 Connector
X1D	ETX - X4 Connector
DIMM1	DDR3 SODIMM connector

2.4.1 RTC Battery Connector (CN1)

Pin	Pin Name	Signal Type	Signal level
1	RTCBAT	PWR	+3.3V
2	GND	GND	

2.4.2 SPI Rom Flash Connector (CN2)

Pin	Pin Name	Signal Type	Signal level
1	SPI_DATAIN_F	I/O	3.3V
2	GND	GND	
3	SPI_CLK_F	I/O	3.3V
4	+3V3_SPI	PWR	3.3V
5	SPI_DATAOUT_F	I/O	3.3V

6	SPI_CS#_F	I/O	3.3V
7	NC		

2.4.3 Fan Connector (CN4)

Pin	Pin Name	Signal Type	Signal level
1	FAN_TAC	NA	
2	+5V	PWR	+5V
3	GND	GND	

2.4.4 SATA Connector (CN5)

Pin	Pin Name	Signal Type	Signal level
1	GND	GND	
2	SATA_TX0_P_C	DIFF	
3	SATA_TX0_N_C	DIFF	

4	GND	GND
5	SATA_RX0_N_C	DIFF
6	SATA_RX0_P_C	DIFF
7	GND	GND

2.4.5 SATA Connector (CN6)

Pin	Pin Name	Signal Type	Signal level
1	GND	GND	
2	SATA_TX1_P_C	DIFF	
3	SATA_TX1_N_C	DIFF	
4	GND	GND	
5	SATA_RX1_N_C	DIFF	
6	SATA_RX1_P_C	DIFF	
7	GND	GND	

2.4.6 LPC Debug Port Connector (CN7)

Pin	Pin Name	Signal Type	Signal level
1	LAD0	I/O	+3.3V
2	LAD1	I/O	+3.3V
3	LAD2	I/O	+3.3V
4	LAD3	I/O	+3.3V
5	+3.3V	PWR	+3.3V
6	LFRAME#	IN	
7	A_RST#	OUT	+3.3V
8	GND	GND	
9	LPC_CLK	OUT	
10	LDRQ#0	IN	
11	LDRQ#1	IN	
12	SERIRQ	I/O	+3.3V

2.4.7 ETX – X1 Connector (X1A)

Pin	Signal	Pin	Signal
1	GND	2	GND
3	PCI2_CLK33	4	PCI3_CLK33

**AMI
BIOS Setup**

3.1 System Test and Initialization

These routines test and initialize board hardware. If the routines encounter an error during the tests, you will either hear a few short beeps or see an error message on the screen. There are two kinds of errors: fatal and non-fatal. The system can usually continue the boot up sequence with non-fatal errors.

System configuration verification

These routines check the current system configuration stored in the CMOS memory and BIOS NVRAM. If system configuration is not found or system configuration data error is detected, system will load optimized default and re-boot with this default system configuration automatically.

There are four situations in which you will need to setup system configuration:

1. You are starting your system for the first time
2. You have changed the hardware attached to your system
3. The system configuration is reset by Clear-CMOS jumper
4. The CMOS memory has lost power and the configuration information has been erased.

The ETX-A55E CMOS memory has an integral lithium battery backup for data retention. However, you will need to replace the complete unit when it finally runs out.

3.2 AMI BIOS Setup

AMI BIOS ROM has a built-in Setup program that allows users to modify the basic system configuration. This type of information is stored in battery-backed CMOS RAM and BIOS NVRAM so that it retains the Setup information when the power is turned off.

Entering Setup

Power on the computer and press immediately. This will allow you to enter Setup.

Main

Set the date, use tab to switch between date elements.

Advanced

Enable/disable boot option for legacy network devices.

Chipset

Host bridge parameters.

Boot

Enables/disables quiet boot option.

Security

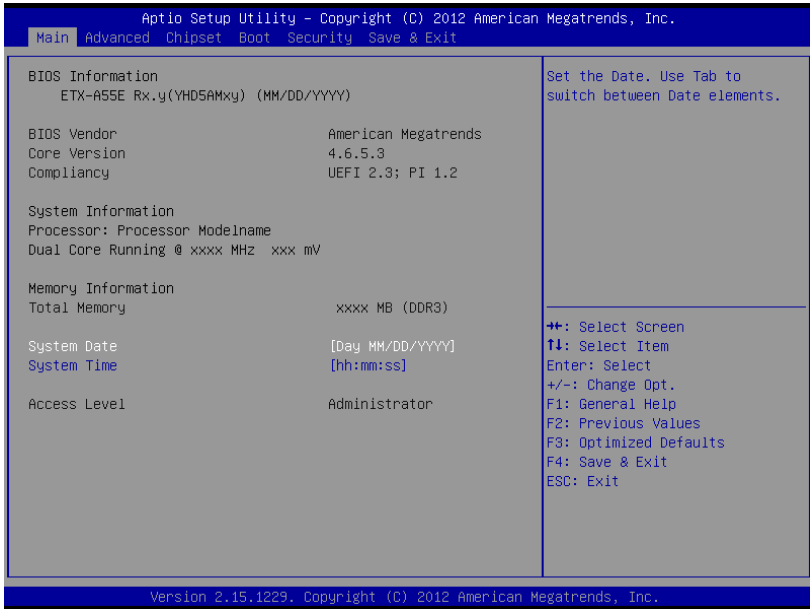

Set setup administrator password.

Save & Exit

Exit system setup after saving the changes.

Setup Menu

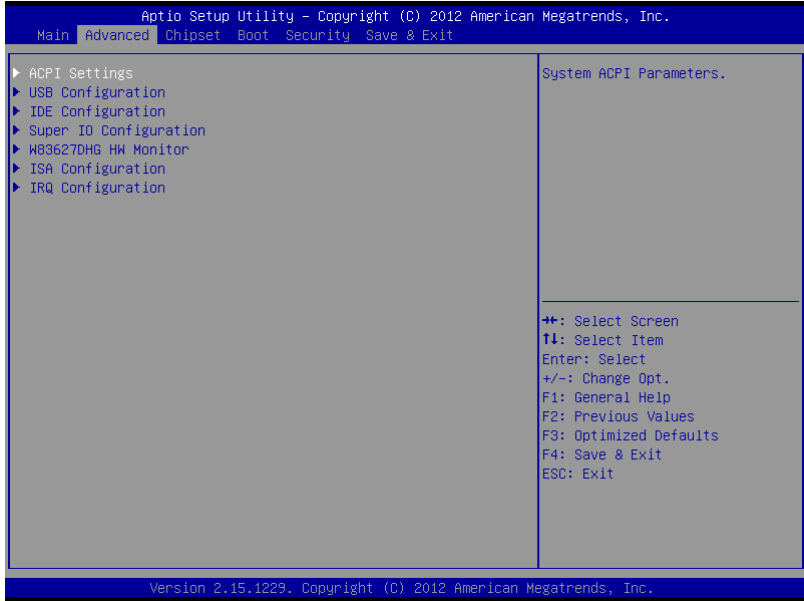

Setup submenu: Main

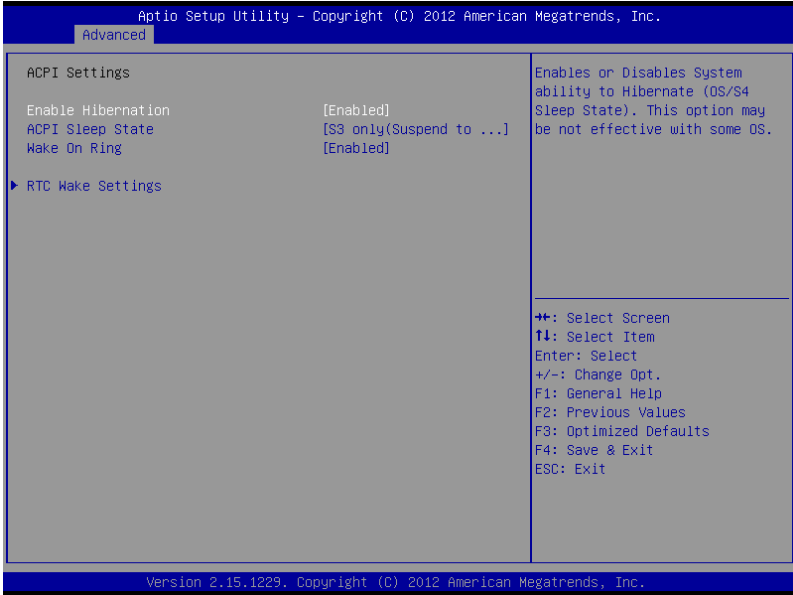

Options summary: **(default setting)**

System Date	Day MM:DD:YYYY	
Change the month, year and century. The 'Day' is changed automatically.		
System Time	hh : mm : ss	
Change the clock of the system.		

Setup submenu: Advanced

ACPI Settings

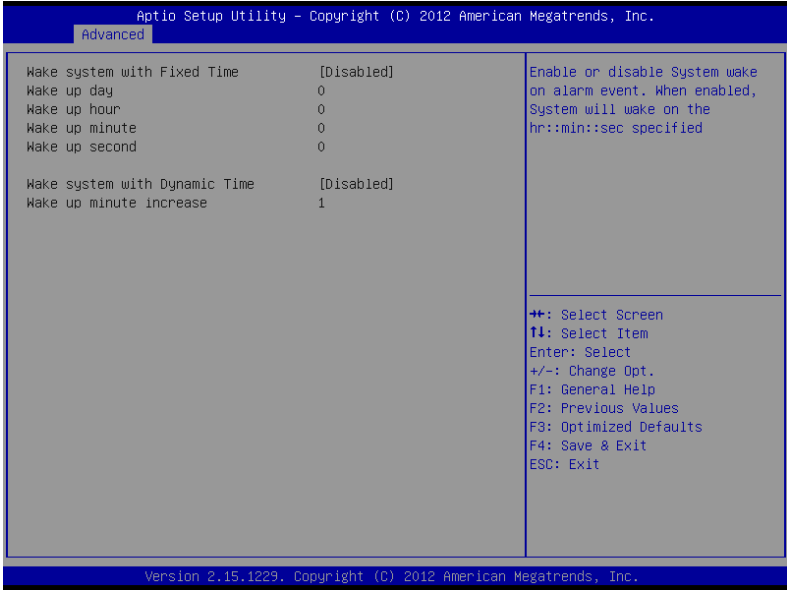

Options summary: (*default setting*)

Enable Hibernation	Enabled	
	Disabled	
Enabled or disabled hibernate (OS/S4 Sleep State).		
ACPI Sleep State	Suspend Disabled	
	S3 only(Suspend to RAM)	
Select the ACPI state used for System Suspend		
Wake on Ring	Enabled	
	Disabled	
Enabled or disabled wake on ring function.		

RTC Wake Settings		
Enable system to wake from S5 using RTC alarm.		

RTC Wake Settings

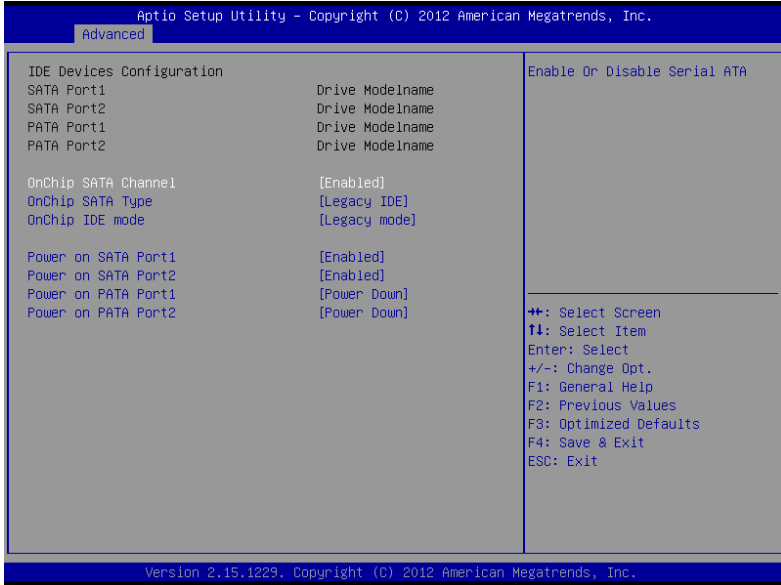

Options summary: **(default setting)**

Wake system with Fixed Time	Disabled	
	Enabled	
Enable or disable System wake on alarm event. Wake up time is setting by following settings.		
Wake up day	0-31	
Select 0 for daily system wake up, 1-31 for which day of the month that you would like the system to wake up		
Wake up hour	0-23	

Wake up minute	0-59	
Wake up second	0-59	
Wake system with	Disabled	
Dynamic Time	Enabled	
Enable or disable System wake on alarm event. Wake up time is current time + Increase minutes.		
Wake up minute increase	1-5	

IDE Configuration

Options summary: (default setting)

OnChip SATA Channel	Disabled	
	Enabled	
Enable or Disable Serial ATA		
OnChip SATA Type	Legacy IDE	
	AHCI	
Configure SATA controller operating as IDE/AHCI mode.		
OnChip IDE mode	Legacy mode	
	Native mode	
Configure IDE controller operating as legacy mode or native PCI device mode.		

SATA Power on SATA	Enabled	
Port1/SATA Port2	Power Down	
Enable Or Disable Power on SATA Port1/ SATA Port2.		
SATA Power on PATA	Enabled	
Port1/PATA Port2	Power Down	
Enable Or Disable Power on PATA Port1/PATA Port2.		

USB Configuration

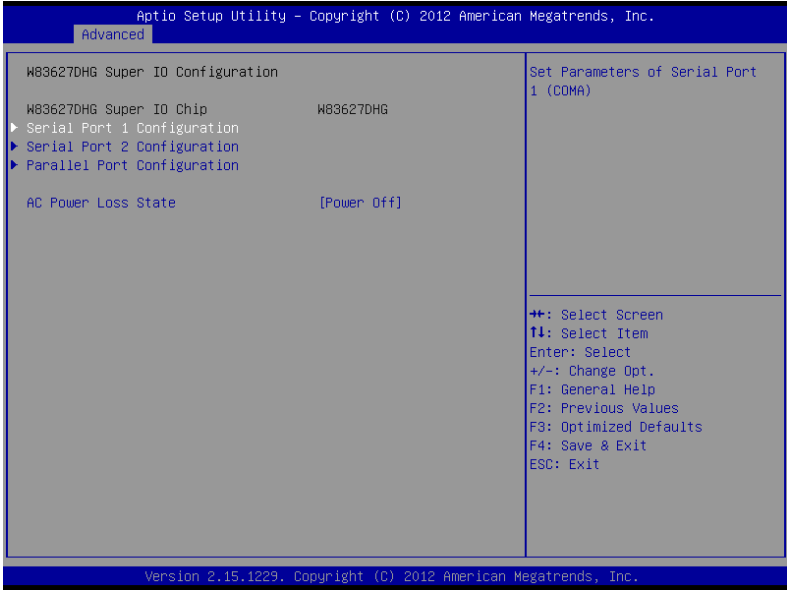

Options summary: (default setting)

Legacy USB Support	Enabled	
	Disabled	
	Auto	
Enables BIOS Support for Legacy USB Support. When enabled, USB can be functional in legacy environment like DOS. AUTO option disables legacy support if no USB devices are connected. DISABLE option will keep USB devices available only for EFI application		
Device Name (Emulation Type)	Auto	
	Floppy	

	Forced FDD	
	Hard Disk	
	CD-ROM	
<p>If Auto. USB devices less than 530MB will be emulated as Floppy and remaining as Floppy and remaining as hard drive. Forced FDD option can be used to force a HDD formatted drive to boot as FDD(Ex. ZIP drive)</p>

Administrator Password/	Not set	
User Password		

You can install a Supervisor password, and if you install a supervisor password, you can then install a user password. A user password does not provide access to many of the features in the Setup utility.

Install the Password:

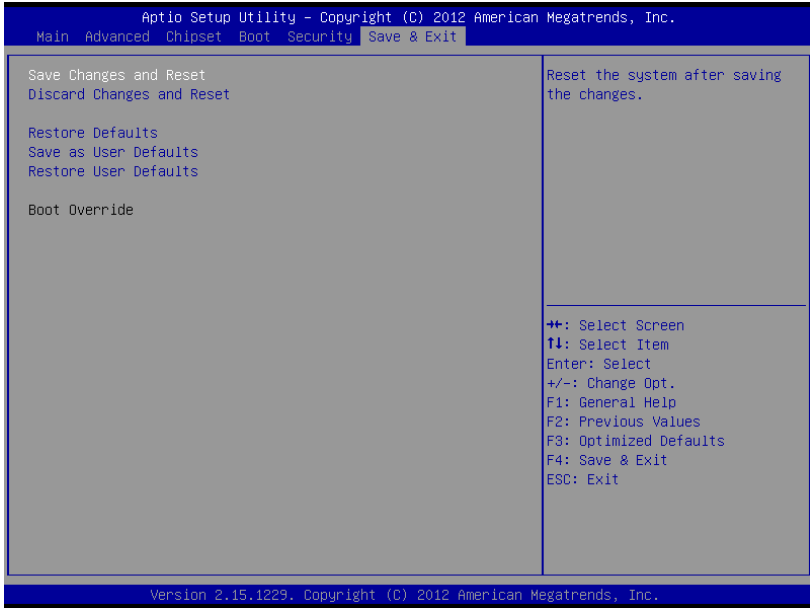

Press Enter on this item, a dialog box appears which lets you enter a password. You can enter no more than six letters or numbers. Press Enter after you have typed in the password. A second dialog box asks you to retype the password for confirmation. Press Enter after you have retyped it correctly. The password is

required at boot time, or when the user enters the Setup utility.

Removing the Password:

Highlight this item and type in the current password. At the next dialog box press Enter to disable password protection.

Setup submenu: Exit

Options summary: **(default setting)**

Save Changes and Reset		
Reset the system after saving the changes		
Discard Changes and Reset		
Reset system setup without saving any changes		
Restore Defaults		
Restore/Load Default values for all the setup options.		
Save as User Defaults		
Save the changes done so far as User Defaults		
Restore User Defaults		

Restore the User Defaults to all the setup options		
Boot Override		
Boot to specified device.

**Driver
Installation**

The ETX-A55E comes with a driver disk that contains all drivers and utilities you need to setup your product.

Insert the disk and the installation guide will start automatically. If it doesn't, please follow the sequence below to install the drivers.

Follow the sequence below to install the drivers:

Step 1 – Install Chipset/ VGA Drivers

Step 2 – Install LAN Drivers

Step 3 – Install Audio Drivers

Step 4 – Install AHCI Drivers (Windows XP only, Optional)

Step 5 – Install PCI to ISA Bridge Drivers

Step 6 – Install Serial Port Drivers (Optional)

Please read instructions below for further detailed installations.

4.1 Installation

Insert the ETX-A55E driver disk into the disk drive and install the drivers from Step 1 to Step 5 in order.

Step 1 – Install Chipset/ VGA Drivers

Note: For Windows XP users, please install Microsoft.NET framework 4.5 (included in the step1 folder of the disk) prior to installing the chipset/ VGA drivers. Users may also go online for the latest version.

1. Open the **STEP 1 - CHIPSET** folder and select your OS
2. Open the **Setup.exe** file in the folder
3. Follow the instructions
4. Drivers will be installed automatically

Step 2 – Install LAN Drivers

1. Open the **Step 2 - LAN** folder and select your OS
2. Open the **Setup.exe** file in the folder
3. Follow the instructions
4. Drivers will be installed automatically

Step 3 – Install Audio Driver

1. Click on the **Step 3 - AUDIO** folder and select your OS
2. Open the **Setup.exe** file in the folder

3. Follow the instructions
4. Drivers will be installed automatically

Step 4 – Install AHCI Driver (Windows XP only, Optional)

Please refer to Appendix D AHCI Settings

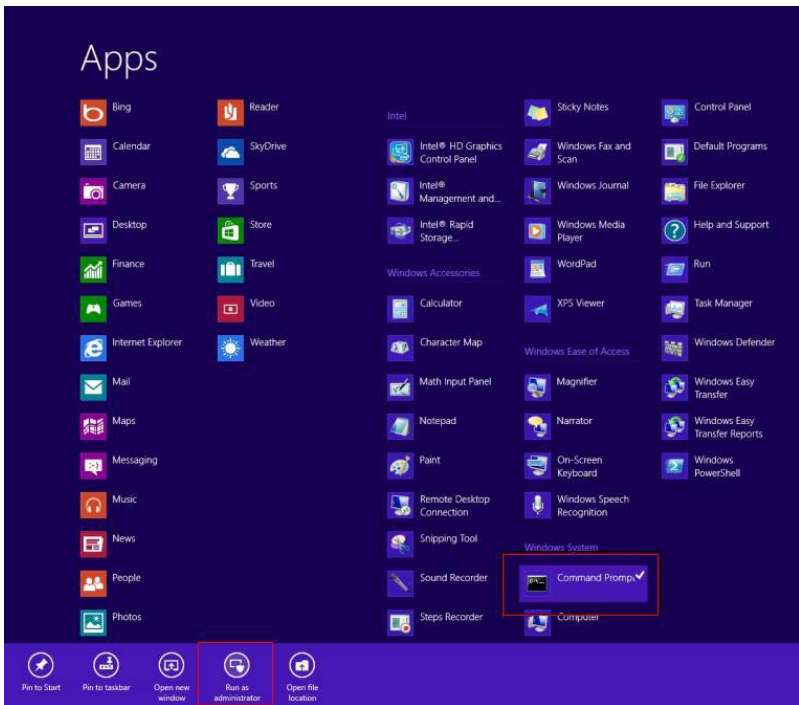

Step 5 – Install PCI to ISA Bridge Driver

1. Go to Device Manager
2. Double-click on **Other PCI Bridge Device** to open the properties dialog box
3. Select **Update Drivers...** and **Next**
4. Select **Search for a suitable driver...** followed by **Next**
5. Select **Specify a location** followed by **Next**
6. Select **Browse**
7. Open the **lte** file from the disk (Driver/ Step5 – PCI to ISA Bridge)
8. Follow through the steps to complete installation

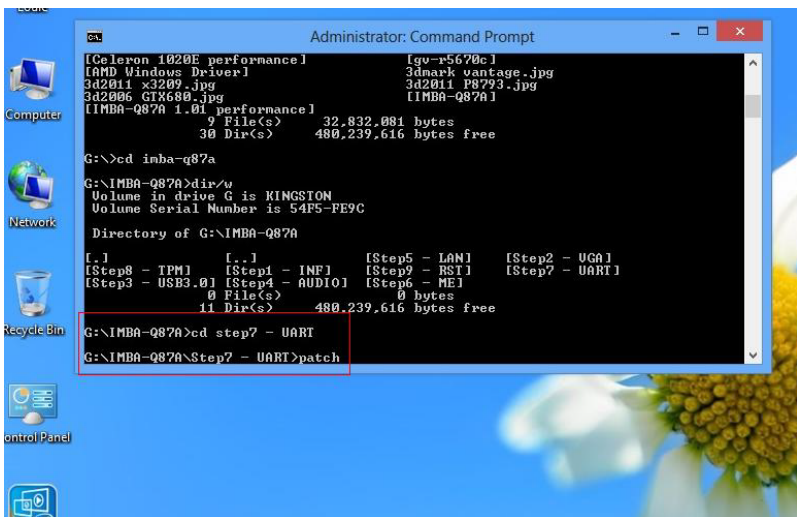

Step 6 – Install Serial Port Drivers (Optional)

For Windows 8:

1. Open the Apps Screen, right click on the **Command Prompt** tile and select **Run as Administrator**

- To install the driver (patch.bat), you will first have to locate the file in command prompt. To do that, first go to the directory which contains the file by entering **<drive letter>**: eg. if the driver is in D drive, enter **D:**
- You are now at the directory containing the installation file. Next, go to the folder in which the file resides by entering **cd <folder>** eg: if the file is in a folder named abc, enter **cd <abc>**.
- You are now at the folder where the file is located. Enter the **patch.bat** to open and install the drivers. If your file is in a subfolder, enter the **cd <folder>** command again to access the subfolder (screenshot below is for reference only).

```
Administrator: Command Prompt

G:\IMBA-Q87A\Step7 - UART>patch
```

5. Reboot after installation completes.
6. To confirm the installation, go to Device Manager, expand the Ports (COM & LPT) tree and double click on any of the COM ports to open its properties. Go to the Driver tab, select Driver Details and click on **serial.sys**, you should see its provider as **Windows (R) Win 7 DDK Provider**.

For Windows 7:**1. Change User Account Control settings to *Never notify***

2. Reboot and log in as administrator

3. Run patch.bat as administrator

For Windows XP

1. Open the **Step 6 – Serial Port Driver (Optional)** folder and select your **WINXP**
2. Open the **patch.bat** file in the folder
3. Follow the instructions
4. Drivers will be installed automatically

Appendix

A

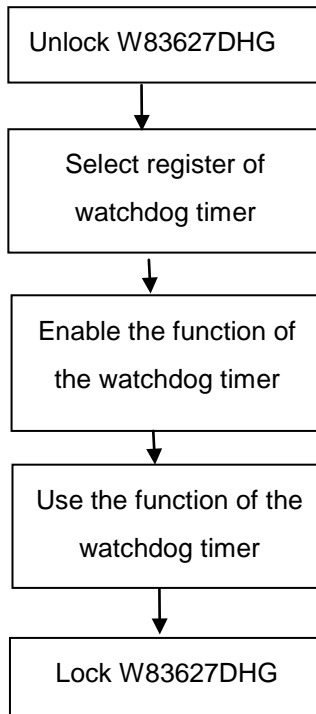

Programming the Watchdog Timer

A.1 Programming

ETX-A55E utilizes W83627DHG-P chipset as its watchdog timer controller.

Below are the procedures to complete its configuration and the AEON initial watchdog timer program is also attached based on which you can develop customized program to fit your application.

Configuring Sequence Description

There are three steps to complete the configuration setup:

- (1) Enter the W83627DHG config Mode
- (2) Modify the data of configuration registers
- (3) Exit the W83627DHG config Mode. Undesired result may occur if the config Mode is not exited normally.

(1) Enter the W83627DHG config Mode

To enter the W83627DHG config Mode, two special I/O write operations are to be performed during Wait for Key state. To ensure the initial state of the key-check logic, it is necessary to perform two write operations to the Special Address port (2EH). The different enter keys are provided to select configuration ports (2Eh/2Fh) of the next step.

	Address Port	Data Port
87h,87h:	2Eh	2Fh

(2) Modify the Data of the Registers

All configuration registers can be accessed after entering the config Mode. Before accessing a selected register, the content of Index 07h must be changed to the LDN to which the register belongs, except some Global registers.

(3) Exit the W83627DHG config Mode

The exit key is provided to select configuration ports (2Eh/2Fh) of the next step.

	Address Port	Data Port
0aah:	2Eh	2Fh

WatchDog Timer Register I (Index=F5h, Default=00h)

CRF5 (PLED and KBC P20 Control Mode Register)

Bit 7-5 : select PLED mode

= 000 Power LED pin is driven high.

= 001 Power LED pin outputs 0.5Hz pulse with 50% duty cycle.

= 010 Power LED pin is driven low.

= 011 Power LED pin outputs 2Hz pulse with 50% duty cycle.

= 100 Power LED pin outputs 1Hz pulse with 50% duty cycle.

= 101 Power LED pin outputs 4Hz pulse with 50% duty cycle.

= 110 Power LED pin outputs 0.25Hz pulse

with 50% duty cycle.

=111 Power LED pin outputs 0.25Hz pulse with 50% duty cycle..

Bit 4 : WDTO# count mode is 1000 times faster.

= 0 Disable.

= 1 Enable.

Bit 3 : select WDTO# count mode.

= 0 second

= 1 minute

Bit 2 : Enable the rising edge of keyboard Reset (P20) to force Time-out event.

= 0 Disable

= 1 Enable

Bit 1 : Disable / Enable the WDTO# output low pulse to the KBRST# pin (PIN60)

= 0 Disable

= 1 Enable

Bit 0 : Reserved.

WatchDog Timer Register II (Index=F6h, Default=00h)

- Bit 7-0** = 0 x 00 Time-out Disable
- = 0 x 01 Time-out occurs after 1
second/minute
- = 0 x 02 Time-out occurs after 2
second/minutes
- = 0 x 03 Time-out occurs after 3
second/minutes
-
- = 0 x FF Time-out occurs after 255
second/minutes

WatchDog Timer Register III (Index=F7h, Default=00h)

- Bit 7** : Mouse interrupt reset Enable or Disable
- = 1 Watchdog Timer is reset upon a
Mouse interrupt
- = 0 Watchdog Timer is not affected by
Mouse interrupt

- Bit 6** : Keyboard interrupt reset Enable or

Disable

= 1 Watchdog Timer is reset upon a
Keyboard interrupt

= 0 Watchdog Timer is not affected by
Keyboard interrupt

Bit 5 : Force Watchdog Timer Time-out. Write
Only

= 1 Force Watchdog Timer time-out
event: this bit is self-clearing

Bit 4 : Watchdog Timer Status. R/W

= 1 Watchdog Timer time-out occurred

= 0 Watchdog Timer counting

Bit 3-0 : These bits select IRQ resource for
Watchdog. Setting of 2 selects SMI.

A.2 W83627DHG Watchdog Timer Initial Program

Example: Setting 10 sec. as Watchdog timeout interval

```

	[D0000000 - D0003FFF] Realtek PCIe FE Family Controller
	[D0000000 - D00FFFFF] PCI standard PCI-to-PCI bridge
	[D0004000 - D0004FFF] Realtek PCIe FE Family Controller
	[E0000000 - EFFFFFFF] System board
	[FEB00000 - FEB3FFFF] AMD Radeon HD 6250 Graphics
	[FEB40000 - FEB43FFF] Microsoft UAA Bus Driver for High Definition Audio
	[FEB44000 - FEB47FFF] Microsoft UAA Bus Driver for High Definition Audio
	[FEB48000 - FEB480FF] Standard Enhanced PCI to USB Host Controller
	[FEB49000 - FEB49FFF] Standard OpenHCD USB Host Controller
	[FEB4A000 - FEB4A0FF] Standard Enhanced PCI to USB Host Controller
	[FEB4B000 - FEB4BFFF] Standard OpenHCD USB Host Controller
	[FEB4C000 - FEB4C0FF] Standard Enhanced PCI to USB Host Controller
	[FEB4D000 - FEB4DFFF] Standard OpenHCD USB Host Controller
	[FEC00000 - FEC00FFF] Motherboard resources
	[FEC10000 - FEC10FFF] Motherboard resources
	[FED00000 - FED003FF] High precision event timer
	[FED00000 - FED00FFF] Motherboard resources

B.3 IRQ Mapping Chart

 Interrupt request (IRQ)	
 (ISA) 0	System timer
 (ISA) 1	Standard 101/102-Key or Microsoft Natural PS/2 Keyboard
 (ISA) 3	Communications Port (COM2)
 (ISA) 4	Communications Port (COM1)
 (ISA) 8	System CMOS/real time clock
 (ISA) 9	Microsoft ACPI-Compliant System
 (ISA) 12	Microsoft PS/2 Mouse
 (ISA) 13	Numeric data processor
 (ISA) 14	Primary IDE Channel
 (ISA) 15	Secondary IDE Channel
 (PCI) 16	Microsoft UAA Bus Driver for High Definition Audio
 (PCI) 16	PCI standard PCI-to-PCI bridge
 (PCI) 17	Standard Enhanced PCI to USB Host Controller
 (PCI) 17	Standard Enhanced PCI to USB Host Controller
 (PCI) 17	Standard Enhanced PCI to USB Host Controller
 (PCI) 18	AMD Radeon HD 6250 Graphics
 (PCI) 18	Standard OpenHCD USB Host Controller
 (PCI) 18	Standard OpenHCD USB Host Controller
 (PCI) 18	Standard OpenHCD USB Host Controller
 (PCI) 19	Microsoft UAA Bus Driver for High Definition Audio

B.4 DMA Channel Assignments

Direct memory access (DMA)

4 Direct memory access controller

Appendix

C

AHCI Settings

C.1 Setting AHCI

OS installation to SETUP AHCI Mode

Note: Installation is only possible with floppy disks on Windows XP

Step 1: Copy files from “Driver DVD -> Step4 – AHCI(Optional)\WinXP_32” to diskette.

Step 2: Connect the USB Floppy drive to the board and insert the diskette from previous step.

Step 3: Configure SATA Controller to AHCI mode in **BIOS SETUP**

Step 4: Boot to DVD/CD-ROM device to install OS

Step 5: Press “**F6**” to install AHCI driver

Step 6: Press “S” to install AHCI driver

Step 7: Choose “AMD AHCI Compatible RAID Controller-x86 platform” for Windows XP 32-bit system; “AMD AHCI Compatible RAID Controller-x64 platform” for Windows XP 64-bit system.

Step 8: Windows Setup will display the controller name you selected in previous step and continue to install OS when “ENTER” pressed.
