## Caution

There is a danger of explosion if the battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions and your local government's recycling or disposal directives.

***Attention:***

Il y a un risque d'explosion si la batterie est remplacée de façon incorrecte. Ne la remplacer qu'avec le même modèle ou équivalent recommandé par le constructeur. Recycler les batteries usées en accord avec les instructions du fabricant et les directives gouvernementales de recyclage.

## Packing List

Before you begin installing your card, please make sure that the following materials have been shipped:

- FWS-2350
- CD-ROM for manual (in PDF format) and drivers

If any of these items should be missing or damaged, please contact your distributor or sales representative immediately.

**General  
Information**

## 1.1 Introduction

---

FWS-2350 adopts the Intel® Dual Core Atom™ C2358 1.7 GHz/ Quad Core Atom™ C2558 2.4 GHz. The system memory features DDR3 Long-DIMM socket, ECC or non-ECC SDRAM up to 16GB. It deploys 6x Gigabit Ethernet LAN ports with optional 3 pair LAN bypass function. The condensed appearance of the FWS-2350 features desktop form factor that fits nicely into a space-limited environment.

This compact FWS-2350 is equipped with an optional CF socket. In addition, it offers flexible expansion with network products and features 2x optional Mini-Card socket, 2x USB2.0 ports and 1x RJ-45 console port. The console port deploys console re-direction that increases the network security via remote control. All of these designs provide for a more user-friendly solution.

## 1.2 Features

---

- Built-in Gigabuilt Ethernet x 6
- Dual Core Intel® Atom™ C2358 1.7 GHz/ Quad Core Atom™ C2558 2.4 GHz
- Supports QuickAssist Crypto Acceleration
- DDR3 Long-DIMM socket, supports up to 16GB ECC or non-ECC SDRAM
- Built-in Intel® I211 LAN Controller and Marvell PHY 88E1543
- System cooling fan x 1
- Support 2 pairs LAN bypass function (optional)
- Compact desktop design

### 1.3 Specifications

## 1.4 General System Information

Chapter

2

**Quick  
Installation  
Guide**

## 2.1 Safety Precautions

---

The installation is intended for technically qualified personnel who have experience installing and configuring system boards.

The equipment can be installed in a restricted access location (RAL) only.

A restricted access location is a site location for equipment where the following criteria apply:

01. Access can only be gained by service persons or by users who have been trained on the restrictions and the precautions for this specific site.

02. Access is by means of at least one of the following, special tool, lock and key, or other means of security, and is controlled by the authority responsible for the location.

### Safety Precautions:

#### **Warning!**

*Always completely disconnect the power cord from your board whenever you are working on it. Do not make connections while the power is on, because a sudden rush of power can damage sensitive electronic components.*

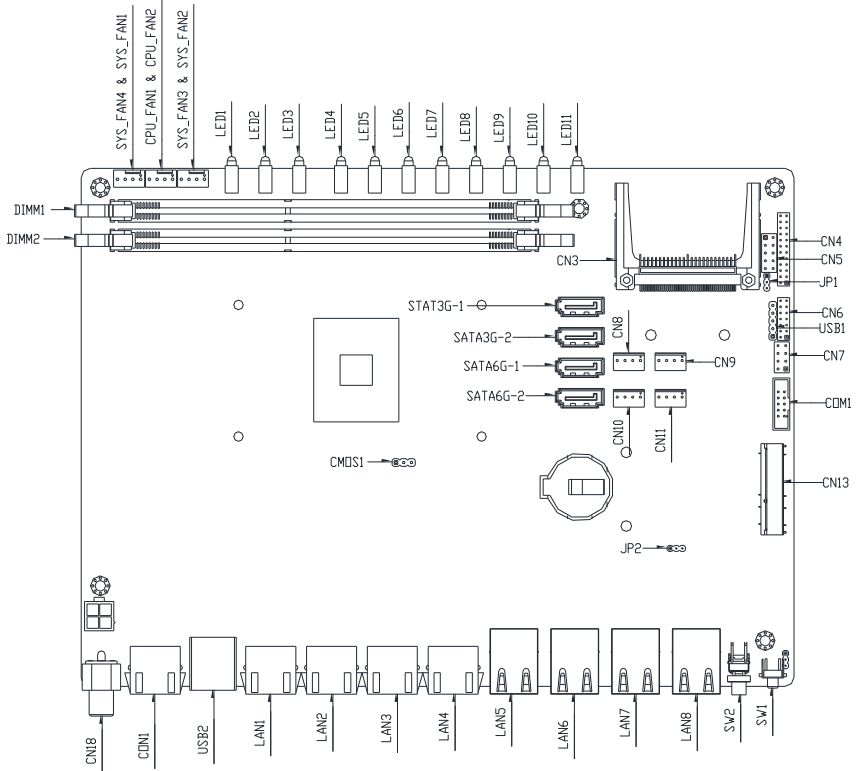

#### **Caution!**

*Always ground yourself to remove any static charge before touching the board. Modern electronic devices are very sensitive to static electric charges. Use a grounding wrist strap at all times. Place all electronic components on a static-dissipative surface or in a static-shielded bag when they are not in the chassis*

## 2.2 Location of Connectors of Main Board

\*Memory assembly priority: (1) DIMM1 (2) DIMM2

LEDs on Front Panel of FWS-2350

Connectors on Rear Panel of FWS-2350

### 2.3 Mechanical Drawing of Main Board

## 2.4 List of Jumpers

---

The board has a number of jumpers that allow you to configure your system to suit your application.

The table below shows the function of each of the board's jumpers:

| <b>Label</b> | <b>Function</b>        |
|--------------|------------------------|
| CMOS1        | CMOS Setting Selection |
| JP2          | Auto PWRBTN Selection  |
| JP1          | CF POWER Selection     |

## 2.5 List of Connectors

---

The board has a number of connectors that allow you to configure your system to suit your application. The table below shows the function of each board's connectors:

| <b>Label</b> | <b>Function</b>           |
|--------------|---------------------------|
| DIMM1        | DDR3 U-DIMM SOCKET        |
| DIMM2        | DDR3 U-DIMM SOCKET        |
| CN16         | 4P ATX POWER SUPPLY INPUT |
| CN18         | DC 12V IN JACK            |
| CPU_FAN1     | 4P SMART FAN              |
| SYS_FAN1     | 4P SMART FAN              |
| SYS_FAN2     | 4P SMART FAN              |
| CN7          | KB/MS                     |
| COM1         | COM PORT                  |
| CON1         | console PORT              |
| USB1         | USB 2.0 *1                |
| USB2         | USB 2.0 *2                |
| CN5          | Front Panel Pinheader     |

---

|             |                   |
|-------------|-------------------|
| SATA6G_1/2  | SATA3 INTERFACE   |
| SATA3G_1/2  | SATA2 INTERFACE   |
| CN8.9.10.11 | SATA POWER        |
| CN13        | Mini PCI-E socket |
| CN4/CN6     | LAN LED Pinheader |

---

## 2.6 Setting Jumpers

---

You configure your card to match the needs of your application by setting jumpers. A jumper is the simplest kind of electric switch. It consists of two metal pins and a small metal clip (often protected by a plastic cover) that slides over the pins to connect them. To “close” a jumper you connect the pins with the clip.

To “open” a jumper you remove the clip. Sometimes a jumper will have three pins, labeled 1, 2 and 3. In this case you would connect either pins 1 and 2 or 2 and 3.

A pair of needle-nose pliers may be helpful when working with jumpers.

If you have any doubts about the best hardware configuration for your application, contact your local distributor or sales representative before you make any change.

Generally, you simply need a standard cable to make most connections.

## 2.7 CF POWER Selection (JP1)

| JP1 | Function       |
|-----|----------------|
| 1-2 | 5V             |
| 2-3 | 3.3V (Default) |

## 2.8 Auto PWRBTN Selection (JP2)

| JP2 | Function                        |
|-----|---------------------------------|
| 1-2 | Don't use Auto PWRBTN (Default) |
| 2-3 | Use Auto PWRBTN                 |

## 2.9 CMOS Setting Selection (CMOS1)

| CMOS1 | Function         |
|-------|------------------|
| 1-2   | Normal (Default) |
| 2-3   | Clear CMOS       |

## 2.10 LAN LED Connector (CN4)

| Pin | Signal  | Pin | Signal |
|-----|---------|-----|--------|
| 1   | L1_ACT# | 2   | L1_1K  |
| 3   | L1_ACT  | 4   | L1_100 |
| 5   | L2_ACT# | 6   | L2_1K  |
| 7   | L2_ACT  | 8   | L2_100 |
| 9   | L3_ACT# | 10  | L3_1K  |
| 11  | L3_ACT  | 12  | L3_100 |
| 13  | L4_ACT# | 14  | L4_1K  |

|    |         |    |        |
|----|---------|----|--------|
| 15 | L4_ACT  | 16 | L4_100 |
| 17 | L5_ACT# | 18 | L5_1K  |
| 19 | L5_ACT  | 20 | L5_100 |
| 21 | L6_ACT# | 22 | L6_1K  |
| 23 | L6_ACT  | 24 | L6_100 |

### 2.11 Front Panel Connector (CN5)

| Pin | Signal               | Pin | Signal               |
|-----|----------------------|-----|----------------------|
| 1   | Power On Button (-)  | 2   | Power On Button (+)  |
| 3   | HDD LED(-)           | 4   | HDD LED(+)           |
| 5   | External Speaker (-) | 6   | External Speaker (+) |
| 7   | Power LED (-)        | 8   | Power LED (+)        |
| 9   | Reset Switch (-)     | 10  | Reset Switch (+)     |

### 2.12 LAN LED Connector (CN6)

| Pin | Signal    | Pin | Signal    |
|-----|-----------|-----|-----------|
| 1   | L7_ACT#   | 2   | L7_1K     |
| 3   | L7_ACT    | 4   | L7_100    |
| 5   | L8_ACT#   | 6   | L8_1K     |
| 7   | L8_ACT    | 8   | L8_100    |
| 9   | BPLED1-   | 10  | BPLED1+   |
| 11  | BPLED2-   | 12  | BPLED2+   |
| 13  | STLED-RED | 14  | STLED-GRN |

### 2.13 SATA Power Connector (CN8.9.10.11)

| Pin | Signal | Pin | Signal |
|-----|--------|-----|--------|
| 1   | +12V   | 2   | GND    |
| 3   | GND    | 4   | +5V    |

### 2.14 4-pin ATX Power Connector (CN16)

| Pin | Signal | Pin | Signal |
|-----|--------|-----|--------|
| 1   | GND    | 2   | GND    |
| 3   | +12V   | 4   | +12V   |

### 2.15 Pin Header (USB1)

| Pin | Signal | Pin | Signal |
|-----|--------|-----|--------|
| 1   | +5V    |     |        |
| 2   | USBD1- |     |        |
| 3   | USBD1+ |     |        |
| 4   | GND    |     |        |
| 5   | GND    |     |        |

### 2.16 Console Port (CON1)

| Pin | Signal | Pin | Signal |
|-----|--------|-----|--------|
| 1   | RTS1X  | 2   | DTR1X  |
| 3   | SOUT1X | 4   | GND    |
| 5   | GND    | 6   | SIN1X  |
| 7   | DSR1X  | 8   | CTS1X  |

## 2.17 Hard Disk Installation

---

Step1: Remove the cover

Step 2: Slide right to remove casing

Step 3: Turn screw clockwise to open HDD casing

Step 4: Attach all four screws of the casing to the HDD

Step 5: Attach the SATA and Power cable to the HDD

Step 6: Place the HDD onto the HDD bracket of the casing

Step 7: Cover up the casing

Step 8: Turn the screw counter-clockwise to secure the casing

Step 9: Connect the SATA and Power cables to the mainboard

Step 10: Place the casing into the chassis, slide right to secure

Step 11: Close and secure the cover

## 2.18 VGA Card Installation

---

Step 1: Remove the cover

Step 2: Insert the VGA Card into Mini-PCI slot

Step 3: Secure the card by tightening the screws

Step 4: Connect your VGA device. Both screws must be secured for the connector to function properly

Step 5: Close and secure the cover

Chapter

3

**AMI  
BIOS Setup**

### 3.1 System Test and Initialization

---

These routines test and initialize board hardware. If the routines encounter an error during the tests, you will either hear a few short beeps or see an error message on the screen. There are two kinds of errors: fatal and non-fatal. The system can usually continue the boot up sequence with non-fatal errors.

#### System configuration verification

These routines check the current system configuration stored in the CMOS memory and BIOS NVRAM. If system configuration is not found or system configuration data error is detected, system will load optimized default and re-boot with this default system configuration automatically.

There are four situations in which you will need to setup system configuration:

1. You are starting your system for the first time
2. You have changed the hardware attached to your system
3. The system configuration reset by Clear-CMOS jumper
4. The CMOS memory has lost power and the configuration information has been erased.

The FWS-2350 CMOS memory has an integral lithium battery backup for data retention. However, you will need to replace the complete unit when it finally runs down.

## 3.2 AMI BIOS Setup

---

AMI BIOS ROM has a built-in Setup program that allows users to modify the basic system configuration. This type of information is stored in battery-backed CMOS RAM and BIOS NVRAM so that it retains the Setup information when the power is turned off.

### Entering Setup

Power on the computer then press <Del> or <F2> immediately. This will allow you to enter Setup.

### Main

Set the date, use tab to switch between date elements.

### Advanced

Enable/disable boot option for legacy network devices.

### Chipset

Host bridge parameters.

### Boot

Enables/disables quiet boot option.

### Security

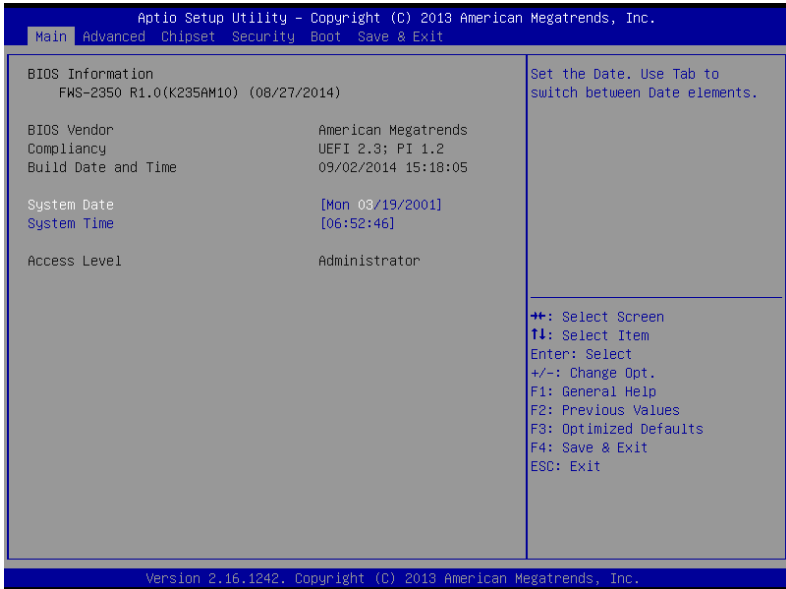

Set setup administrator password.

### Save & Exit

Exit system setup after saving the changes.

## Setup Menu

### Setup submenu: Main

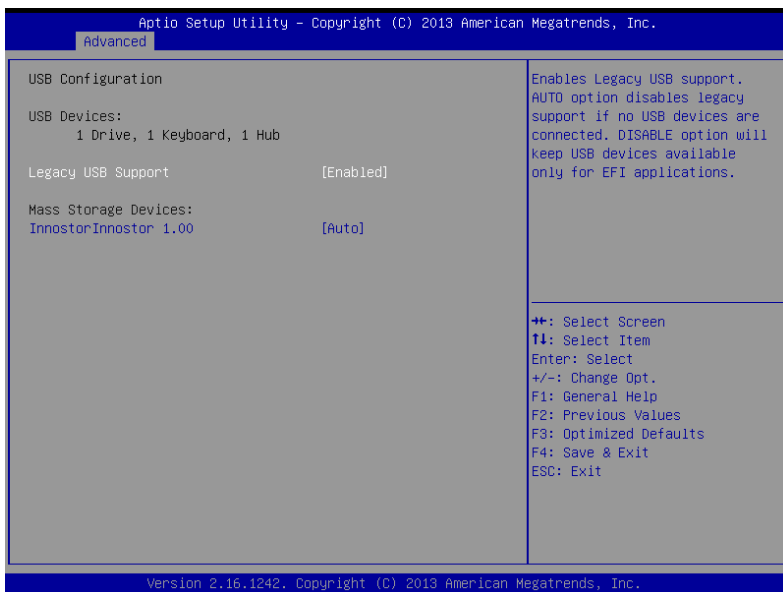

## Setup submenu: Advanced

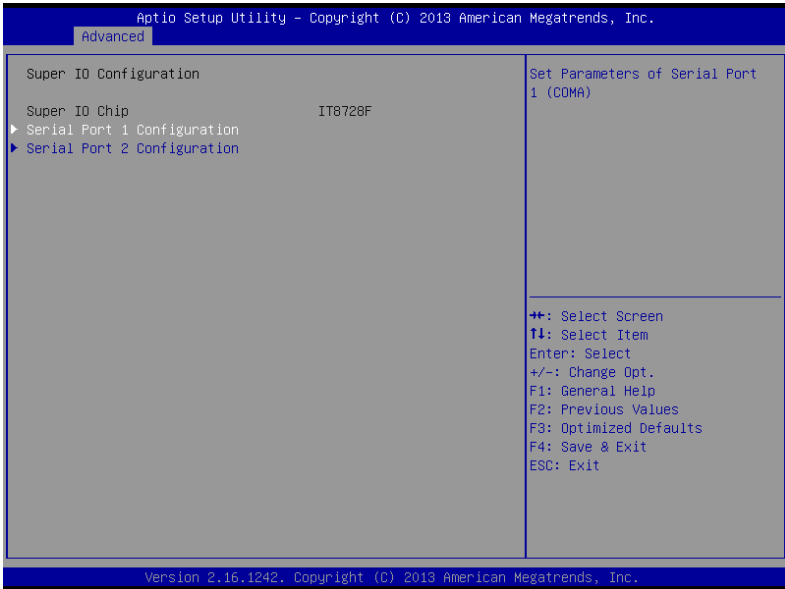

## USB Configuration

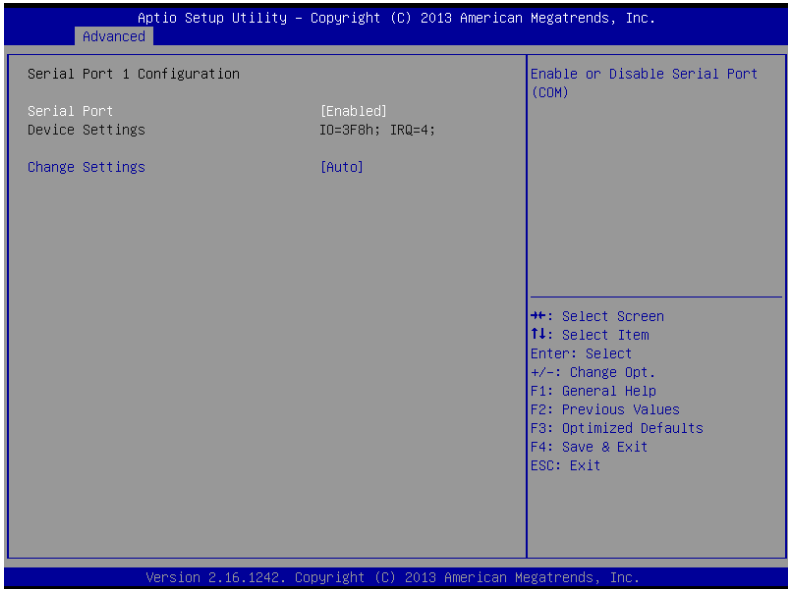

### Options summary:

|   |            |                                   |
|---|------------|-----------------------------------|
| Legacy USB Support  | Enabled    | Optimal Default, Failsafe Default |
|   | Disabled   |                                   |
|   | Auto       |                                   |
| Enables BIOS Support for Legacy USB Support. When enabled, USB can be functional in legacy environment like DOS.<br>AUTO option disables legacy support if no USB devices are connected                         |            |                                   |
| Device Name (Emulation Type)  | Auto       | Optimal Default, Failsafe Default |
|   | Floppy     |                                   |
|   | Forced FDD |                                   |
|   | Hard Disk  |                                   |
|   | CDROM      |                                   |
| If Auto. USB devices less than 530MB will be emulated as Floppy and remaining as Floppy and remaining as hard drive. Forced FDD option can be used to force a HDD formatted drive to boot as FDD(Ex. ZIP drive) |            |                                   |

## Super IO Configuration

## Serial Port 1 Configuration

### Options summary:

|   |                           |                                   |
|---|---------------------------|-----------------------------------|
| Serial Port                                       | Disabled                  | Optimal Default, Failsafe Default |
|   | Enabled                   |                                   |
| Allows BIOS to En/Disable correspond serial port. |                           |                                   |
| Change Settings                                   | Auto                      | Optimal Default, Failsafe Default |
|   | IO=3F8h; IRQ=4;           |                                   |
|   | IO=3F8h;                  |                                   |
|   | IRQ=3,4,5,6,7,9,10,11,12; |                                   |
|   | IO=2F8h;                  |                                   |
|   | IRQ=3,4,5,6,7,9,10,11,12; |                                   |
|   | IO=3E8h;                  |                                   |
|   | IRQ=3,4,5,6,7,9,10,11,12; |                                   |
|   | IO=2E8h;                  |                                   |
|   | IRQ=3,4,5,6,7,9,10,11,12; |                                   |
| Allows BIOS to Select Serial Port resource.       |                           |                                   |

## Power Management

### S5 RTC Wake Settings (Fixed Time)

#### Options summary:

|  |          |                                   |
|--|----------|-----------------------------------|
| Wake system with Fixed Time  | Disabled | Optimal Default, Failsafe Default |
|  | Enabled  |                                   |
| En/Disable System wake on alarm event. When enabled, System will wake on the hr:min:sec specified            |          |                                   |
| Wake up day  | 0-31     | Default 0                         |
| Select 0 for daily system wake up, 1-31 for witch day of the moth that you would like the system to wake up. |          |                                   |
| Wake up day  | 0-23     | Default 0                         |
| Select 0-23 For example enter 3 for 3am and 15 for 3pm   |          |                                   |
| Wake up day  | 0-59     | Default 0                         |
| Select 0-59  |          |                                   |
| Wake up day  | 0-59     | Default 0                         |
| Select 0-59  |          |                                   |

### S5 RTC Wake Settings (Dynamic Time)

Options summary:

|   |          |                                   |
|---|----------|-----------------------------------|
| Wake system with  | Disabled | Optimal Default, Failsafe Default |
| Dynamic Time  | Enabled  |                                   |
| En/Disable System wake on alarm event. When enabled, System will wake on current time + Increases minute(s) |          |                                   |
| Wake up day   | 1-5      | Default 1                         |
| Select 1-5  |          |                                   |

## Security

### Change User/Supervisor Password

You can install a Supervisor password, and if you install a supervisor password, you can then install a user password. A user password does not provide access to many of the features in the Setup utility.

If you highlight these items and press Enter, a dialog box appears which lets you enter a password. You can enter no more than six letters or numbers. Press Enter after you have typed in the password. A second dialog box asks you to retype the password for confirmation. Press Enter after you have retyped it correctly. The password is required at boot time, or when the user enters the Setup utility.

### Removing the Password

Highlight this item and type in the current password. At the next dialog box press Enter to disable password protection.

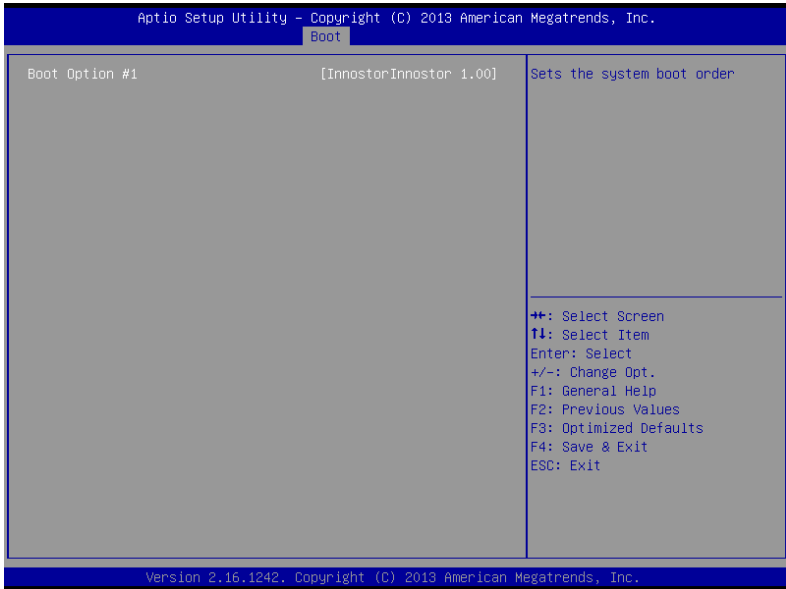

### Setup submenu: Boot

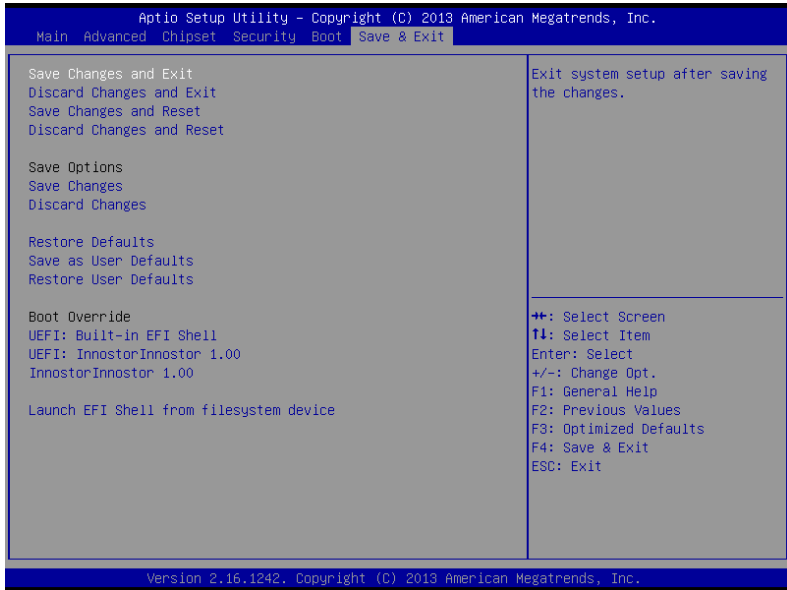

#### Options summary:

|   |              |         |
|---|--------------|---------|
| Setup Prompt Timeout  | 1            | Default |
|   | 1-65536      |         |
| Number of seconds to wait for setup activation key. 65535(0xFFFF) means indefinite waiting. |              |         |

4

**Driver  
Installation**

The FWS-2350 comes with an AutoRun CD-ROM that contains all drivers and utilities that can help you to install the driver automatically.

Insert the driver CD, the driver DVD-title will auto start and show the installation guide. If not, please follow the sequence below to install the drivers.

***Follow the sequence below to install the drivers:***

Step 1 – Install LAN Driver

Please read instructions below for further detailed installations.

## 4.1 Installation:

---

Insert the FWS-2350 CD-ROM into the DVD-ROM drive and install the drivers.

### Step 1 – Install LAN Driver

1. Move the base driver tar file to the directory of your choice. For example, use '/home/username/LAN' or '/usr/local/src/LAN'.
2. Untar/unzip the archive: `tar xzf <filename.tar.gz>`
3. Follow the instructions of section installation in the README
4. The README will help you install the driver step by step

C

# Standard LAN Bypass Platform Settings

## C.1 Status LED

---

FWS-2350 provides a LED indicator which can show any LED status controlled by the AAEMON SDK. Users are able to program the LED status to express different status.

## C.2 Status LED Configuration

---

**Table 1 : Truth Table of Status LED**

| STA_LED2 | STA_LED1 | STA_LED0 | LED States               |
|----------|----------|----------|--------------------------|
| 0        | 0        | 0        | LED Off                  |
| 0        | 0        | 1        | Red                      |
| 0        | 1        | 0        | Red Blinking (Slowly)    |
| 0        | 1        | 1        | Red Blinking (Quickly)   |
| 1        | 0        | 0        | Reserved                 |
| 1        | 0        | 1        | Green Blinking (Slowly)  |
| 1        | 1        | 0        | Green Blinking (Quickly) |
| 1        | 1        | 1        | Green                    |

**Table 2 : Status LED relative register mapping table**

CPLD Slave Address 0x90 (Note1)

|          | Attribute | Offset(SMBUS) | BitNum | Value     |
|----------|-----------|---------------|--------|-----------|
| STA_LED2 | R/W       | 0x00 (Note2)  | 2      | (Table 1) |
| STA_LED1 | R/W       | 0x00 (Note2)  | 1      | (Table 1) |
| STA_LED0 | R/W       | 0x00 (Note2)  | 0      | (Table 1) |

### C.3 Status LED Sample Code

---

```
*****
#define Byte    CPLD_SLAVE_ADDRESS //This parameter is represented from Note1
#define Byte    OFFSET             //This parameter is represented from Note2
*****

bData = aaeonSmbusReadByte(CPLD_SLAVE_ADDRESS, OFFSET);

switch( LED_FLAG)
{
case 0:
{
    //LED Off
    //BIT2=0, BIT1=0, BIT0=0
    bData = bData & 0xF8;
    break;
}
case 1:
{
    //Red LED On
    //BIT2=0, BIT1=0, BIT0=1
    bData = (bData & 0xF8) | 0x01;
    break;
}
case 2:
{
    //Red LED Blink
    //BIT2=0, BIT1=1, BIT0=0
    bData = (bData & 0xF8) | 0x02;
    break;
}
case 3:
{
    //Red LED Fast Blink
    //BIT2=0, BIT1=1, BIT0=1
    bData = (bData & 0xF8) | 0x03;
    break;
}
}
```

```
}
case 4:
{
    //Green LED On
    //BIT2=1, BIT1=1, BIT0=1
    bData = (bData & 0xF8) | 0x07;
    break;
}
case 5:
{
    //Green LED Blink
    //BIT2=1, BIT1=0, BIT0=1
    bData = (bData & 0xF8) | 0x05;
    break;
}
case 6:
{
    //Green LED Fast Blink
    //BIT2=1, BIT1=1, BIT0=0
    bData = (bData & 0xF8) | 0x06;
    break;
}
default:
    break;
}

SmbusWriteByte(CPLD_SLAVE_ADDRESS, 0x00, bData);
```

## C.4 LAN Bypass

---

FWS-2350 provides LAN Bypass kit and allow uninterrupted network traffic even if a single in-line appliance is shut down or became unresponsive.

## C.5 LAN Bypass Configuration

---

**Table 1 : ID Select table of LAN kit**

| LAN_ID2 | LAN_ID1 | LAN_ID0 | LAN kit selected   |
|---------|---------|---------|--------------------|
| 0       | 0       | 0       | LAN Kit 1 Selected |
| 0       | 0       | 1       | LAN Kit 2 Selected |
| 0       | 1       | 0       | LAN Kit 3 Selected |
| 0       | 1       | 1       | LAN Kit 4 Selected |
| 1       | 0       | 0       | LAN Kit 5 Selected |
| 1       | 0       | 1       | LAN Kit 6 Selected |
| 1       | 1       | 0       | LAN Kit 7 Selected |
| 1       | 1       | 1       | LAN Kit 8 Selected |

**Table 2 : LAN Bypass relative register table**

| Function | Description   |
|----------|---|
| LAN_ID3  |   |
| LAN_ID2  | Use for selecting which LAN kit will be configured, refer to Table 1 of ID Select table of LAN kit.                 |
| LAN_ID1  | They should be set before ACT_EN.   |
| LAN_ID0  |   |
| PWR_ON   | Use for configuring LAN Bypass function behavior to LAN kit, when system power on.<br>1: Bypass<br>0: Pass Through  |
| PWR_OFF  | Use for configuring LAN Bypass function behavior to LAN kit, when system power off.<br>1: Bypass<br>0: Pass Through |

|        |  |
|--------|--|
| WDT_EN | Use for configuring WDT function behavior to LAN kit, when WDT triggered.<br>0: Normal WDT reset (Default)<br>1: Force Bypass            |
| ACT_EN | Use for activating programming of LAN kit. It is edge triggering (falling edge 1 to 0) and should be set to high(1) as its normal state. |

**Table 3 : LAN Bypass relative register mapping table**

| CPLD Slave Address 0x90 (Note1) |           |               |        |           |
|---------------------------------|-----------|---------------|--------|-----------|
|                                 | Attribute | Offset(SMBUS) | BitNum | Value     |
| LAN_ID3                         | R/W       | 0x01(Note2)   | 3      | (Table 1) |
| LAN_ID2                         | R/W       | 0x01(Note2)   | 2      | (Table 1) |
| LAN_ID1                         | R/W       | 0x01(Note2)   | 1      | (Table 1) |
| LAN_ID0                         | R/W       | 0x01(Note2)   | 0      | (Table 1) |
| PWR_ON                          | R/W       | 0x01(Note2)   | 6      | (Table 2) |
| PWR_OFF                         | R/W       | 0x01(Note2)   | 5      | (Table 2) |
| WDT_EN                          | R/W       | 0x01(Note2)   | 4      | (Table 2) |
| ACT_EN                          | R/W       | 0x01(Note2)   | 7      | (Table 2) |

## C.6 LAN Bypass Sample Code

```

*****
#define Byte    CPLD_SLAVE_ADDRESS //This parameter is represented from Note1
#define Byte    OFFSET             //This parameter is represented from Note2
*****

// Select Lan Pair
BYTE bLanSel = LAN_PAIR;

BYTE bData = SmbusReadByte(CPLD_SLAVE_ADDRESS, OFFSET);
// Set Reg01h bit3
if(bLanSel & 0x08)
    bData = bData | 0x08;
else
    bData = bData & 0xF7;

```

```
// Set Reg01h bit2
if(bLanSel & 0x04)
    bData = bData | 0x04;
else
    bData = bData & 0xFB;
// Set Reg01h bit1
if(bLanSel & 0x02)
    bData = bData | 0x02;
else
    bData = bData & 0xFD;
// Set Reg01h bit0
if(bLanSel & 0x01)
    bData = bData | 0x01;
else
    bData = bData & 0xFE;

// Power On Action (Reg01h bit6)
if(SET_PASS_THROUGH) // Pass Through
    bData = bData & 0xBF;
else // Bypass
    bData = bData | 0x40;

// Power Off Action (Reg01h bit5)
if(SET_PASS_THROUGH) // Pass Through
    bData = bData & 0xDF;
else // Bypass
    bData = bData | 0x20;

// WDT Action (Reg01h bit4)
if(SET_WDT_RESET) // Reset
    bData = bData & 0xEF;
else // Bypass
    bData = bData | 0x10;

SmbusWriteByte(CPLD_SLAVE_ADDRESS, OFFSET, bData);

// Apply Settings (Reg01h bit7)
```

```

bData = SmbusReadByte(CPLD_SLAVE_ADDRESS, OFFSET);
SmbusWriteByte(CPLD_SLAVE_ADDRESS, OFFSET, bData & 0x7F);
Sleep(500);
bData = SmbusReadByte(CPLD_SLAVE_ADDRESS, OFFSET);
SmbusWriteByte(CPLD_SLAVE_ADDRESS, OFFSET, bData | 0x80);

```
