## Packing List

Before you begin installing your card, please make sure that the following materials have been shipped:

- 1 Floppy Cable
- 1 ATA-100 Cable
- 1 PS/2 Keyboard and Mouse Cable
- 1 USB Cable
- 1 SATA Cable
- 1 ATX Cable
- 1 Quick Installation Guide
- 1 CD-ROM for manual (in PDF format) and drivers
- 1 HSB-945P CPU Card

If any of these items should be missing or damaged, please contact your distributor or sales representative immediately.

# **General Information**

## 1.1 Introduction

The HSB-945P supports Intel® Atom™ N270 1.6GHz processor by utilizing the Intel® 945GSE + ICH7-M chipset. Moreover it equips one DDRII SODIMM and supports DDRII 400/533 up to 1GB. This model accommodates two RJ-45 connectors (one 10/100 Base-TX and one 10/100/1000Base-TX Ethernet) that are controlled by one Intel® 82562GZ/82573L and Intel® 82574L. This configuration allows for fast network connections and multi-task data transmission on the network.

The LCD controller is integrated on Intel® 945GME+Chrontel 7307 and the VGA integrated in Intel Graphic Engine GMA950. In addition, HSB-945P deploys 5 USB2.0, 4 COM (3 RS-232 and 1 RS-232/422/485), one parallel port, and digital I/O for a flexible I/O selection. The storage of HSB-945P supports two SATA II, one IDE and one Type II CompactFlash™.

The HSB-945P provides an ideal combination of high performance, widely expandable interfaces and compact size for applications that have space limitations. It will be an ideal solution for versatile applications.

## 1.2 Features

---

- Intel® Atom™ N270 Processor
- Intel® 945GSE + ICH7M Chipset
- 200-Pin Non-ECC DDRII 400/533 SODIMM x 1, Up to 1GB
- 10/100Base-TX Ethernet x 1 & Gigabit Ethernet x1
- Integrated Graphics Media Accelerator GMA950
- AC97 Codes Audio Daughter Board Optional
- ATA100 x1, SATA II x 2, Compact Flash Type II x 1
- USB 2.0 x 5, RS-232/422/485 x 1, RS-232 x 3, Parallel x 1, Digital I/O
- PCI Expansion
- ATX 2.1

### 1.3 Specifications

#### **System**

- CPU Onboard Intel® Atom™ N270  
1.6GHz Processor
- System Memory One 200-pin DDRII SODIMM,  
supports DDRII 400/533 up to 1GB
- Chipset Intel® 945GSE + Intel® ICH7-M
- Ethernet LAN1: Intel® 82562GZ/82573L  
LAN2: Intel® 82574L  
10/100Base-TX RJ-45 x 1,  
PCI-Express 10/100/1000Base-TX  
RJ-45 x 1
- BIOS Award Plug & Play SPI BIOS –  
8Mb ROM
- Watchdog Timer 1~255 steps, can be set with  
software on Super I/O
- H/W Status Monitor Monitoring system temperature,  
voltage, and cooling fan status
- Expansion Interface PICMG/ PCI Interface
- Battery Lithium battery
- Power Requirement ATX +12V, 4-pin power connector
- Board Size 7.3"(L) x 4.8" (W)  
(185mm x 122mm)
- Gross Weight 0.66lb (0.3kg)

- Operating Temperature 32°F~140°F(0°C~60°C)
- Storage Temperature -4°F~158°F(-20°C~70°C)
- Operating Humidity 10~80%, non-condensing
- EMC CE/FCC Class A

### ***Display***

- Chipset Intel® 945GSE +Chrontel 7307
- Graphic Engine VGA Integrated in Intel® Graphic Engine GMA-950
- Resolution Analog up to 1600x1200@75Hz
- Output Interface VGA x 1, DVI-D x 1

### ***I/O***

- Storage SATA II x 2 (onboard), 40-pini IDE slot x 1, CompactFlash™ Type II x 1
- Serial Port COM x 4: (Internal Pin Header x 4)  
RS-232 x 3, RS-232/422/485 x 1
- Keyboard/Mouse Mini-DIN PS/2 K/B and Mouse x 1,  
Internal keyboard pin header x 1
- USB USB 2.0 Port on CPU card x 5,  
Internal 5x2 pin header x 2,  
Onboard TYPE-A Connector x 1
- Digital I/O Onboard Programmable 8-bit  
Digital I/O interface (4 input/4

- Audio output)  
AC97 codec audio daughter board  
optional

# **Quick Installation Guide**

***Notice:***

*The Quick Installation Guide is derived from Chapter 2 of user manual. For other chapters and further installation instructions, please refer to the user manual CD-ROM that came with the product.*

**OZONE SAFE**

## 2.1 Safety Precautions

**Warning!**

*Always completely disconnect the power cord from your board whenever you are working on it. Do not make connections while the power is on, because a sudden rush of power can damage sensitive electronic components.*

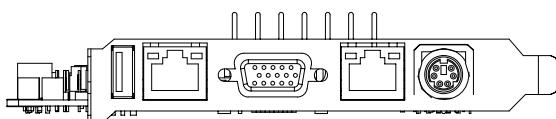

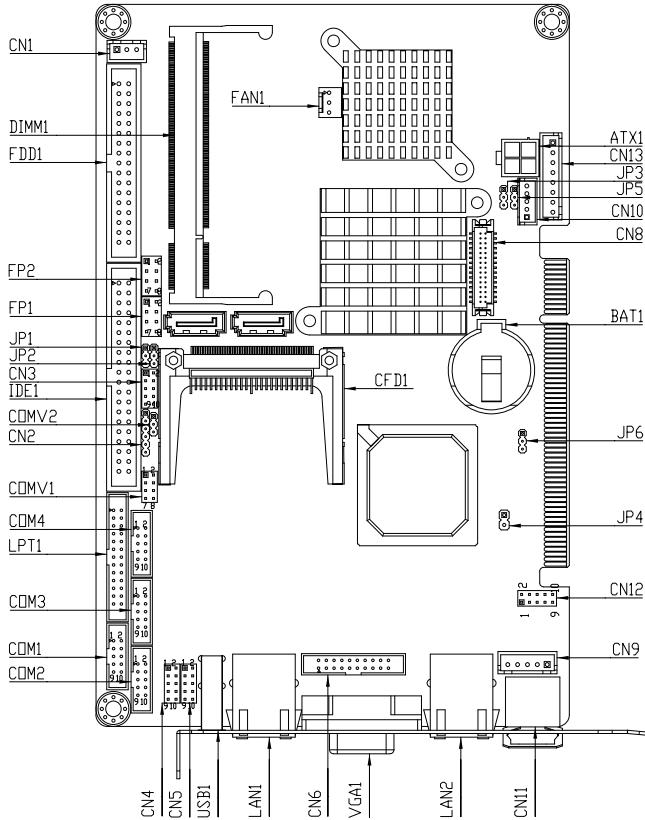

**Caution!**

*Always ground yourself to remove any static charge before touching the board. Modern electronic devices are very sensitive to static electric charges. Use a grounding wrist strap at all times. Place all electronic components on a static-dissipative surface or in a static-shielded bag when they are not in the chassis*

## 2.4 List of Jumpers

The board has a number of jumpers that allow you to configure your system to suit your application.

The table below shows the function of each of the board's jumpers:

Label	Function
JP1	Auto Power on Selection
JP2	CFD Voltage 3.3V/5V Selection
JP3	LVDS Power Selection
JP5	LVDS Inverter Power Selection
JP6	Clear CMOS
COMV1	COM3,4 Port Function Selection
COMV2	COM3,4 Port Power Selection

## 2.5 List of Connectors

The board has a number of connectors that allow you to configure your system to suit your application. The table below shows the function of each board's connectors:

Label	Function
CN1	ATX Power Control Connector
CN2	IrDA Connector
CN3	Digital I/O Connector
CN4~5	USB Pin Header
CN6	DVI Connector
CN8	LVDS Connector
CN9	Internal Keyboard Connector
CN10	LVDS Inverter Power Connector
CN11	PS/2 Keyboard/ Mouse Connector
CN12	Audio Pin Header
FP1	Front Panel Connector 1
FP2	Front Panel Connector 2
VGA1	VGA Display Connector
FDD1	Floppy Connector
IDE1	IDE Connector (Slave)
CFD1	CompactFlash Slot (Master)
COM1, COM3, COM4	RS-232 Serial Port Connector
COM2	RS-232/422/485 Serial Port Connector
LPT1	LPT Port Connector
USB1	USB Connector
LAN1~2	10/100 or 100/1000Base-TX Ethernet Connector
DIMM1	DDRII SODIMM Slot

**Half-size SBC**

## 2.6 Setting Jumpers

You configure your card to match the needs of your application by setting jumpers. A jumper is the simplest kind of electric switch. It consists of two metal pins and a small metal clip (often protected by a plastic cover) that slides over the pins to connect them. To “close” a jumper you connect the pins with the clip.

To “open” a jumper you remove the clip. Sometimes a jumper will have three pins, labeled 1, 2 and 3. In this case you would connect either pins 1 and 2 or 2 and 3.

A pair of needle-nose pliers may be helpful when working with jumpers.

If you have any doubts about the best hardware configuration for your application, contact your local distributor or sales representative before you make any change.

Generally, you simply need a standard cable to make most connections.

## 2.7 Auto Power Selection (JP1)

JP1	Function
Close 1-2	Enable
Close 2-3	Disable (Default)

## 2.8 CFD Voltage 3.3V/5V Selection (JP2)

JP2	Function
1-2	3.3V
2-3	5V (Default)

## 2.9 LVDS Power Selection (JP3)

JP3	Function
1-2	+5V
2-3	+3.3V (Default)

## 2.10 LVDS Inverter Voltage Selection (JP5)

JP5	Function
1-2	+5V
2-3	+12V (Default)

## 2.11 Clear CMOS (JP6)

JP6	Function
1-2	Normal (Default)
2-3	Clear CMOS

## 2.12 COM3, COM4 Port Function Selection (COMV1)

COMV1	Function
Close 1-2	RI3 (Default)

---

Close 3-4	+5V/+12V
Close 5-6	RI4 (Default)
Close 7-8	+5V/+12V

---

## 2.13 COM3, COM4 Port Power Selection (COMV2)

---

COMV2	Function
Close 1-2	+12V
Close 2-3	+5V (Default)

---

## 2.14 ATX Power Control Connector with BP (CN1)

**Award  
BIOS Setup**

### 3.1 System Test and Initialization

These routines test and initialize board hardware. If the routines encounter an error during the tests, you will either hear a few short beeps or see an error message on the screen. There are two kinds of errors: fatal and non-fatal. The system can usually continue the boot up sequence with non-fatal errors. Non-fatal error messages usually appear on the screen along with the following instructions:

Press <F1> to RESUME

Write down the message and press the F1 key to continue the boot up sequence.

### System configuration verification

These routines check the current system configuration against the values stored in the CMOS memory. If they do not match, the program outputs an error message. You will then need to run the BIOS setup program to set the configuration information in memory.

There are three situations in which you will need to change the CMOS settings:

1. You are starting your system for the first time
2. You have changed the hardware attached to your system
3. The CMOS memory has lost power and the configuration information has been erased.

The HSB-945P CMOS memory has an integral lithium battery backup for data retention. However, you will need to replace the complete unit when it finally runs down.

## 3.2 Award BIOS Setup

Awards BIOS ROM has a built-in Setup program that allows users to modify the basic system configuration. This type of information is stored in battery-backed CMOS RAM so that it retains the Setup information when the power is turned off.

### Entering Setup

Power on the computer and press <Del> immediately. This will allow you to enter Setup.

### Standard CMOS Features

Use this menu for basic system configuration. (Date, time, IDE, etc.)

### Advanced BIOS Features

Use this menu to set the advanced features available on your system.

### Advanced Chipset Features

Use this menu to change the values in the chipset registers and optimize your system performance.

### Integrated Peripherals

Use this menu to specify your settings for integrated peripherals. (Primary slave, secondary slave, keyboard, mouse etc.)

### Power Management Setup

Use this menu to specify your settings for power management. (HDD power down, power on by ring, KB wake up, etc.)

### PnP/PCI Configurations

This entry appears if your system supports PnP/PCI.

## PC Health Status

This menu allows you to set the shutdown temperature for your system.

### Load Fail-Safe Defaults

Use this menu to load the BIOS default values for the minimal/stable performance for your system to operate.

### Load Optimized Defaults

Use this menu to load the BIOS default values that are factory settings for optimal performance system operations. While AWARD has designated the custom BIOS to maximize performance, the factory has the right to change these defaults to meet their needs.

### Set Supervisor/User Password

Use this menu to set Supervisor/User Passwords.

### Save and Exit Setup

Save CMOS value changes to CMOS and exit setup.

### Exit Without Saving

Abandon all CMOS value changes and exit setup.

**You can refer to the "AAEON BIOS Item Description.pdf" file in the CD for the meaning of each setting in this chapter.**

**Half-size SBC**

**H S B - 9 4 5 P**

# **Driver Installation**

The HSB-945P comes with a CD-ROM that contains all drivers your need.

***Follow the sequence below to install the drivers:***

- Step 1 – Install INF Driver
- Step 2 – Install VGA Driver
- Step 3 – Install Audio Driver
- Step 4 – Install LAN Driver

Please read following instructions for detailed installations.

## 4.1 Installation:

Insert the HSB-945P CD-ROM into the CD-ROM Drive. And install the drivers from Step 1 to Step 4 in order.

### Step 1 – Install INF Driver

1. Click on the **Step 1-INF** folder and then double click on the **Setup.exe**
2. Follow the instructions that the window shows
3. The system will help you to install the driver automatically

### Step 2 – Install VGA Driver

1. Click on the **Step 2-VGA** folder and select the OS your system is
2. Double click on **Setup.exe** file located in each OS folder
3. Follow the instructions that the window shows
4. The system will help you to install the driver automatically

### Step 3 – Install Audio Driver

1. Click on the **Step 3 - Audio** folder and then double click on the **wdm\_a371.exe**
2. Follow the instructions that the window shows
3. The system will help you to install the driver automatically

### Step 4 – Install LAN Driver

1. Click on the **Step 4-LAN** folder and select the OS your system is
2. Double click on **.exe** file located in each OS folder

3. Follow the instructions that the window shows
4. The system will help you to install the driver automatically

**Appendix**

**A**

# **Programming the Watchdog Timer**

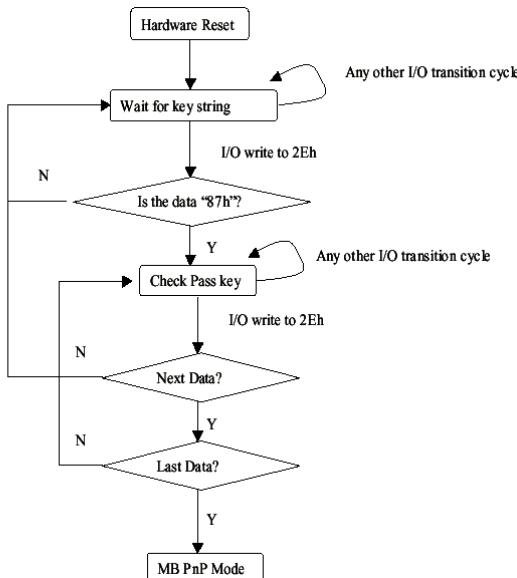

## A.1 Programming

HSB-945P utilizes ITE 8712 chipset as its watchdog timer controller.  
( K version )

Below are the procedures to complete its configuration and the AAEON initial watchdog timer program is also attached based on which you can develop customized program to fit your application.

### Configuring Sequence Description

After the hardware reset or power-on reset, the ITE 8712 enters the normal mode with all logical devices disabled except KBC.

There are three steps to complete the configuration setup: (1) Enter the MB PnP Mode; (2) Modify the data of configuration registers; (3) Exit the MB PnP Mode. Undesired result may occur if the MB PnP Mode is not exited normally.

### (1) Enter the MB PnP Mode

To enter the MB PnP Mode, four special I/O write operations are to be performed during Wait for Key state. To ensure the initial state of the key-check logic, it is necessary to perform four write operations to the Special Address port (2EH). Two different enter keys are provided to select configuration ports (2Eh/2Fh) of the next step.

Address Port	Data Port
87h, 01h, 55h, 55h:	2Eh 2Fh

### (2) Modify the Data of the Registers

All configuration registers can be accessed after entering the MB PnP Mode. Before accessing a selected register, the content of Index 07h must be changed to the LDN to which the register belongs, except some Global registers.

### (3) Exit the MB PnP Mode

Set bit 1 of the configure control register (Index=02h) to 1 to exit the MB PnP Mode.

#### WatchDog Timer Configuration Registers

LDN Index R/W	Reset Configuration Register or Action			
All 02H W N/A	Configuration Control			
07H 71H R/W 00H	WatchDog Timer Control Register			
07H 72H R/W 00H	WatchDog Timer Configuration Register			
07H 73H R/W 00H	WatchDog Timer Time-out Value (LSB) Register			
07H 74H R/W 00H	WatchDog Timer Time-out Value (MSB) Register			

#### Configure Control (Index=02h)

This register is write only. Its values are not sticky; that is to say, a hardware reset will automatically clear the bits, and does not require the software to clear them.

<b>Bit</b>	<b>Description</b>
7-2	Reserved
1	Returns to the Wait for Key state. This bit is used when the configuration sequence is completed.
0	Resets all logical devices and restores configuration registers to their power-on states.

**WatchDog Timer Control Register (Index=71h, Default=00h)**

<b>Bit</b>	<b>Description</b>
7	WDT is reset upon a CIR interrupt
6	WDT is reset upon a KBC (Mouse) interrupt
5	WDT is reset upon a KBC (Keyboard) interrupt
4	WDT is reset upon a read or a write to the Game port base address
3-2	Reserved
1	Force Time-out. This bit is self-clearing
0	WDT status
	1: WDT value reaches 0
	0: WDT value is not 0

**WatchDog Timer Configuration Register (Index=72h, Default=00h)**

<b>Bit</b>	<b>Description</b>
7	WDT Time-out value select
	1: Second
	0: Minute
6	WDT output through KRST (pulse) enable
5	WDT Time-out value Extra select
	1: 4s.
	0: Determine by WDT Time-out value select (bit7 of this register)
4	WDT output through PWROK1/PWROK2 (pulse) enable
3	Select the interrupt level <sup>note</sup> for WDT

**WatchDog Timer Time-out Value (LSB) Register (Index=73h,  
Default=00h)**

**Bit      Description**

**7-0      WDT Time-out value 7-0**

**WatchDog Timer Time-out Value (MSB) Register (Index=74h,  
Default=00h)**

**Bit      Description**

**7-0      WDT Time-out value 15-8**
