

PCM-8200

Intel® Pentium® M and
Celeron® M processors

Compact Board

With LVDS LCD, TV-Out,

Ethernet, Audio, CompactFlash™,

USB, 4 COMs & Mini PCI

Packing List

Before you begin installing your card, please make sure that the following materials have been shipped:

- 1 CPU Card
- 1 Quick Installation Guide
- 1 CD-ROM for manual (in PDF format) and drivers
- 1 Jumper cap

If any of these items should be missing or damaged, please contact your distributor or sales representative immediately.

Contents

**General
Information**

1.1 Introduction

PCM-8200 series are powered by the Intel® Pentium® M processor with the Intel®855GME chipset and new Intel® 6300ESB I/O Controller South Bridge integrated. PCM-8200 is delicately designed for working-efficiency with low power consumption and simple voltage input required application. (5V only workable)

Outstanding Power Efficiency

The PCM-8200 supports Intel® Pentium® M / Celeron® M processors up to 1.60GHz with 400MHz FSB. System memory holds up to 1GB with fast DDR 333MHz providing high calculate and graphic ability but with extreme low power consumption. This feature is especially suitable for Video, Automation controller, Multimedia application.

Besides the excellent CPU performance, PCM-8200 also provides multiple display functions, it allows user to display different content on CRT/LCD, CRT/DVI, CRT/TV, LCD/DVI or LCD/TV this feature opens a shortcut to multi-display demander with cheaper solution. PCM-8200 does really the most power efficiency board that you can find at this moment.

Maximum Expansion Interface

PCM-8200 provides interface capabilities of two ports serial ATA controller; USB 2.0 host controller support up to 4 USB ports (Support Embedded USB DOM); four serial I/O ports support and Watchdog Timer support. In addition, the excellent 48/24/18-bit LVDS supports high quality

LCD display resolution. The TV-out (NTSC & PAL) function extends the display options to CRT, LCD, TV and etc. One Type III mini PCI socket can be used for wireless LAN interface. And onboard Intel® 82541 Ethernet controller stands for fast 1 Gigabyte transferring speed. All featured expansion interfaces have been enhanced in this 8" x 5.75" computer board.

The PCM-8200 is the ideal choice for dust/temperature-sensitive high end Industrial Automation application. For space-constrained environments such automobile, PCM-8200 is also a perfect fit. Even is great for KIOSK and POS implementations with low power consumption and pleasant multimedia presentations.

1.2 Features

- Supports Socket 478-based Intel®Pentium® M and Celeron®M processors
Or onboard Low Voltage Intel® Pentium M processor
- Supports 48-bit Dual channel LVDS TFT panels
- AC-97 3D surround 5.1 channel Audio
- Supports Type II CompactFlash Memory
- Supports Type III Mini PCI and PCI slots
- 4 USB 2.0 / Mini PCI / Digital I/O / TV-Out / SATA

1.3 Specifications

System

- CPU: Socket 478-based Intel® Pentium® M and Celeron M® processor (0.13 μ) up to 1.6GHz with FSB 400 MHz, or onboard Low Voltage Intel® Pentium® M processor up to 1.1GHz
- System: 184-pin DDR SDRAM DIMM x 1, Max. 1GB (PC-266/333)
- Chipset: Intel® 855GME + 6300ESB
- I/O Chipset: ITE IT8712F
- BIOS: Award 512 KB FLASH ROM
- Ethernet: Intel® 82551ER/82541GI (Optional), 10/100/1000Base-T RJ-45 connector x 1
- SSD: Type II CompactFlash slot
- Watchdog Timer: Generate a system reset
- Expansion Interface: Type III Mini PCI x 1, PCI slot x 1
- Battery: Lithium battery
- H/W Status Monitoring: Supports power voltages, fan speed and temperature

monitoring

- Power Supply Voltage: ATX, 5 voltage only
- Board size: 8" (L) x 5.75" (W)
(203mm x 146mm)
- Gross Weight: 1.2lb(0.5Kg)

Display

- Chipset Intel® 855GME + Chrontel 7009
- Memory Size: Shared memory up to 64MB with Dynamic Video Memory Technology
- Resolution: Up to 1280 X 1024 @ 32bpp colors for CRT; Up to 1280 X 1024 @ 24bpp colors for LCD
- Supports CRT/LCD, CRT/DVI, CRT/TV, LCD/DVI and LCD/TV simultaneous display
- Supports CRT/LCD, CRT/DVI, CRT/TV, LCD/DVI and LCD/TV dual view
- Supports screen image rotation

I/O

- MIO: EIDE (UDMA 100) x 1, Serial ATA x 2, FDD x 1, KB + Mouse x 1, RS-232 x 3, RS-232/422/485 x 1, Parallel x 1, CRT x 1

- IrDA: One IrDA Tx/Rx header
- Audio: Mic in, Line in, Line out / Speaker Out. 5.1 output.
- USB: One 5 x 2 and one 9 x 2-1 pin headers
support 4 USB 2.0 ports (One for Embedded USB DOM)
- Digital I/O: Supports 8 in & 8 out, 16 in or 16 out

Chapter

2

Quick Installation Guide

Notice:

The Quick Installation Guide is derived from Chapter 2 of user manual. For other chapters and further installation instructions, please refer to the user manual CD-ROM that came with the product.

2.1 Safety Precautions

Warning!

Always completely disconnect the power cord from your board whenever you are working on it. Do not make connections while the power is on, because a sudden rush of power can damage sensitive electronic components.

Caution!

Always ground yourself to remove any static charge before touching the board. Modern electronic devices are very sensitive to static electric charges. Use a grounding wrist strap at all times. Place all electronic components on a static-dissipative surface or in a static-shielded bag when they are not in the chassis

2.2 Location of Connectors and Jumpers

Component Side

Solder Side

2.3 Mechanical Drawing

Component Side

Solder Side

2.4 List of Jumpers

The board has a number of jumpers that allow you to configure your system to suit your application.

The table below shows the function of each of the board's jumpers:

Jumpers

Label	Function
JP1	Reserve
JP2	LCD Voltage Selection
JP3	Audio Out Selection
JP4	Clear CMOS
JP5	COM2 RS-232/422/485 Selection
JP6	COM2 RS-232/422/485 Selection
JP7	COM2 RS-232/422/485 Selection
JP8	COM2 Ring/+5V/+12V Selection

2.5 List of Connectors

The board has a number of connectors that allow you to configure your system to suit your application. The table below shows the function of each board's connectors:

Connectors

Label	Function
CN1	Channel2 LVDS Connector
CN2	VGA Display Connector
CN3	Front Panel Connector
CN4	System Fan Connector
CN5	Channel1 LVDS Connector
CN6	ATX Power Connector
CN7	LAN LED Connector
CN8	Option PME Connector
CN9	Audio Connector
CN10	TV-Out Connector
CN11	DVI Connector
CN12	Audio 5.1 Channel / SPDIF Connector
CN13	Embedded USB Connector
CN14	USB Connector
CN15	LPT Port Connector
CN16	CPU Fan Connector
CN17	IrDA Connector
CN18	Digital I/O-2 Connector
CN19	PS2 Keyboard/Mouse Connector
CN20	Serial Port Connector
CN21	Digital I/O-1 Connector
FDD1	Floppy Connector

IDE1	EIDE Connector
LAN1	Ethernet Connector
PCI1	PCI Slot
MPCI1	Mini PCI Slot
CFD1	CompactFlash Slot
DIMM1	DIMM Slot
SATA1	Master Serial ATA
SATA2	Slave Serial ATA

2.6 Setting Jumpers

You configure your card to match the needs of your application by setting jumpers. A jumper is the simplest kind of electric switch. It consists of two metal pins and a small metal clip (often protected by a plastic cover) that slides over the pins to connect them. To “close” a jumper you connect the pins with the clip.

To “open” a jumper you remove the clip. Sometimes a jumper will have three pins, labeled 1, 2 and 3. In this case you would connect either pins 1 and 2 or 2 and 3.

A pair of needle-nose pliers may be helpful when working with jumpers.

If you have any doubts about the best hardware configuration for your application, contact your local distributor or sales representative before you make any change.

Generally, you simply need a standard cable to make most connections.

2.7 LCD Voltage Selection (JP2)

JP2	Function
1-2	+5V
2-3	+3.3V (Default)

2.8 Audio Out Selection (JP3)

JP3	Function
1-3, 2-4	W/O Amplifier
3-5, 4-6	W/ Amplifier (Default)

2.9 Clear CMOS (JP4)

Warning:

To avoid damaging the computer, always turn off the power supply before setting "Clear CMOS." Before turning on the power supply, set the jumper back to "Normal."

JP4	Function
1-2	Protected (Default)
2-3	Clear

2.10 COM2 RS-232/422/485 Selection (JP5, JP6 & JP7)

JP5	JP6	JP7	Function
1-3, 2-4	1-3, 2-4	1-2	RS-232 (Default)
3-5, 4-6	3-5, 4-6	3-4	RS-422
3-5, 4-6	3-5, 4-6	5-6	RS-485

2.11 COM2 Ring/+5V/+12V Selection (JP8)

JP8	Function
1-2	+12V
3-4	+5V
5-6	Ring (Default)

2.12 Channel2 LVDS Connector (CN1)

Pin	Signal	Pin	Signal
1	LVDS_TX1+	2	LVDS_TX1-
3	GND	4	GND
5	LVDS_TXCLK+	6	LVDS_TXCLK-
7	GND	8	PPVCC
9	PPVCC	10	PPVCC
11	LVDS_TX2+	12	LVDS_TX2-
13	GND	14	GND
15	LVDS_TX0+	16	LVDS_TX0-
17	LVDS_TX3+	18	LVDS_TX3-

2.13 VGA Display Connector (CN2)

Pin	Signal	Pin	Signal
1	RED	2	+5V
3	GREEN	4	GND
5	BLUE	6	N.C.
7	N.C.	8	DDCDAT
9	GND	10	HSYNC
11	GND	12	VSYNC
13	GND	14	DDCCLK
15	GND	16	N.C.

2.14 Front Panel Connector (CN3)

Pin	Signal	Pin	Signal
1	Power On Button (-)	2	Power On Button (+)
2	IDE LED (-)	4	IDE LED (+)
5	External Buzzer (-)	6	External Buzzer (+)
7	Power LED (-)	8	Power LED (+)
9	Reset Switch (-)	10	Reset Switch (+)

2.15 FAN Connector (CN4)

Pin	Signal
1	GND
2	+5V
3	Speed Sense

2.16 Channel1 LVDS Connector (CN5)

Pin	Signal	Pin	Signal
1	LVDS_TX1+	2	LVDS_TX1-
3	GND	4	GND
5	LVDS_TXCLK+	6	LVDS_TXCLK-
7	GND	8	PPVCC
9	PPVCC	10	PPVCC
11	LVDS_TX2+	12	LVDS_TX2-
13	GND	14	GND
15	LVDS_TX0+	16	LVDS_TX0-
17	LVDS_TX3+	18	LVDS_TX3-
19	ENBKL	20	N.C.

2.17 ATX Power Connector (CN6)

Pin	Signal	Pin	Signal
1	N.C.	11	N.C.
2	N.C.	12	-12V
3	GND	13	GND
4	+5V	14	PS_ON
5	GND	15	GND
6	+5V	16	GND
7	GND	17	GND
8	POWER OK	18	-5V
9	+5VSB	19	+5V
10	+12V	20	+5V

2.18 LAN LED Connector (CN7)

Pin	Signal	Pin	Signal
1	Active LED (+)	2	Active LED (-)
3	Speed 100 LED (+)	4	Speed 100 LED (-)
5	Speed 1000 LED (+)	6	Speed 1000 LED (-)

2.19 Option PME Connector (CN8)

Pin	Signal
1	+5VSB
2	GND
3	#PME
4	SMB_DATA
5	SMB_CLK

2.20 Audio Connector (CN9)

Pin	Signal	Pin	Signal
1	MIC IN	2	MIC +2.5V
3	LINE_IN_GND	4	CD_GND
5	LINE_IN_L	6	CD_IN_L
7	LINE_IN_R	8	CD_GND
9	LINE_IN_GND	10	CD_IN_R
11	LINE_OUT_L	12	LINE_OUT_R
13	LINE_OUT_GND	14	LINE_OUT_GND

2.21 TV_Out Connector (CN10)

Pin	Signal	Pin	Signal
1	Y	2	CVBS
3	GND	4	GND
5	C	6	N.C.
7	GND	8	N.C.

2.22 DVI Connector (CN11)

Pin	Signal	Pin	Signal
1	DVI_TX1+	2	LVDS TX1-
3	GND	4	GND
5	DVI_TXCLK+	6	DVI_TXCLK-
7	GND	8	+5V
9	HotPlug_Detect	10	+5V
11	DVI_TX2+	12	DVI_TX2-
13	GND	14	GND
15	DVI_TX0+	16	DVI_TX0-
17	N.C.	18	N.C.
19	I2C_DATA	20	I2C_CLK

2.23 Audio 5.1 Channel/SPDIF Connector (CN12)

Pin	Signal	Pin	Signal
1	Front-OUT-R	2	GND
3	Front-OUT-L	4	GND
5	Surround-OUT-R	6	GND
7	Surround-OUT-L	8	GND
9	LFE-OUT	10	GND
11	Center-OUT	12	GND
13	SPDIF-OUT	14	SPDIF-IN

2.24 USB Connector (CN13 & CN14)

CN13 (For Embedded USB DOM)

Pin	Signal	Pin	Signal
1	N.C.	2	N.C.
3	N.C.	4	N.C.
5	+5V	6	+5V
7	USBD3-	8	USBD4-
9	USBD3+	10	USBD4+
11	GND	12	GND
13	N.C.	14	N.C.
15	+5V	16	N.C.
17	N.C.	18	N.C.

CN14

Pin	Signal	Pin	Signal
1	+5V	2	GND

3	USBD1-	4	GND
5	USBD1+	6	USBD2+
7	GND	8	USBD2-
9	GND	10	+5V

2.25 LPT Port Connector (CN15)

Pin	Signal	Pin	Signal
1	#STROBE	2	#AFD
3	DATA0	4	#ERROR
5	DATA1	6	#INIT
7	DATA2	8	#SLIN
9	DATA3	10	GND
11	DATA4	12	GND
13	DATA5	14	GND
15	DATA6	16	GND
17	DATA7	18	GND
19	#ACK	20	GND
21	BUSY	22	GND
23	PE	24	GND
25	SELECT	26	N.C.

2.26 FAN Connector (CN16)

Pin	Signal
1	GND
2	+5V
3	Speed Sense

2.27 IrDA Connector (CN17)

Pin	Signal
1	+5V
2	N.C.
3	IRRX
4	GND
5	IRTX
6	N.C.

2.28 Digital I/O-2 Connector (CN18)

This connector offers 4-pair of digital I/O functions and address is 801H.

The pin definitions are illustrated below:

Pin	Signal	Pin	Signal
1	Digital-IN/ OUT	2	Digital-IN/OUT
3	Digital-IN/ OUT	4	Digital-IN/ OUT
5	Digital-IN/ OUT	6	Digital-IN/ OUT
7	Digital-IN/ OUT	8	Digital-IN/ OUT
9	+5V	10	GND

The pin definitions and registers mapping are illustrated below:

**Award
BIOS Setup**

3.1 System test and initialization

These routines test and initialize board hardware. If the routines encounter an error during the tests, you will either hear a few short beeps or see an error message on the screen. There are two kinds of errors: fatal and non-fatal. The system can usually continue the boot up sequence with non-fatal errors. Non-fatal error messages usually appear on the screen along with the following instructions:

Press <F1> to RESUME

Write down the message and press the F1 key to continue the boot up sequence.

System configuration verification

These routines check the current system configuration against the values stored in the CMOS memory. If they do not match, the program outputs an error message. You will then need to run the BIOS setup program to set the configuration information in memory.

There are three situations in which you will need to change the CMOS settings:

1. You are starting your system for the first time
2. You have changed the hardware attached to your system
3. The CMOS memory has lost power and the configuration information has been erased.

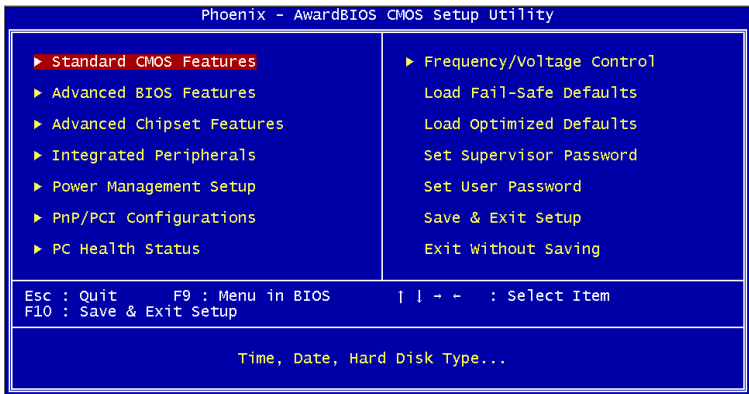

The PCM-8200 CMOS memory has an integral lithium battery backup for data retention. However, you will need to replace the complete unit when it finally runs down.

3.2 Award BIOS Setup

Awards BIOS ROM has a built-in Setup program that allows users to modify the basic system configuration. This type of information is stored in battery-backed CMOS RAM so that it retains the Setup information when the power is turned off.

Entering setup

Power on the computer and press immediately. This will allow you to enter Setup.

Standard CMOS Features

Use this menu for basic system configuration. (Date, time, IDE, etc.)

Advanced BIOS Features

Use this menu to set the advanced features available on your system.

Advanced Chipset Features

Use this menu to change the values in the chipset registers and optimize your system performance.

Integrated Peripherals

Use this menu to specify your settings for integrated peripherals. (Primary slave, secondary slave, keyboard, mouse etc.)

Power Management Setup

Use this menu to specify your settings for power management. (HDD power down, power on by ring etc.)

PnP/PCI Configurations

This entry appears if your system supports PnP/PCI.

PC Health Status

This menu shows you the status of PC.

Frequency/Voltage Control

This menu shows you the display of frequency/voltage Control.

Load Fail-Safe Defaults

Use this menu to load the BIOS default values for the minimal/stable performance for your system to operate.

Load Optimized Defaults

Use this menu to load the BIOS default values that are factory settings for optimal performance system operations. While AWARD has designated the custom BIOS to maximize performance, the factory has the right to change these defaults to meet their needs.

Set Supervisor/User Password

Use this menu to set Supervisor/User Passwords.

Save and Exit Setup

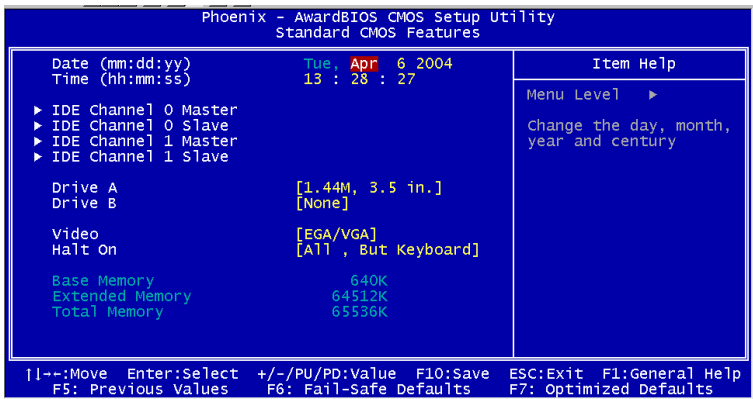

Save CMOS value changes to CMOS and exit setup.

Exit Without Saving

Abandon all CMOS value changes and exit setup.

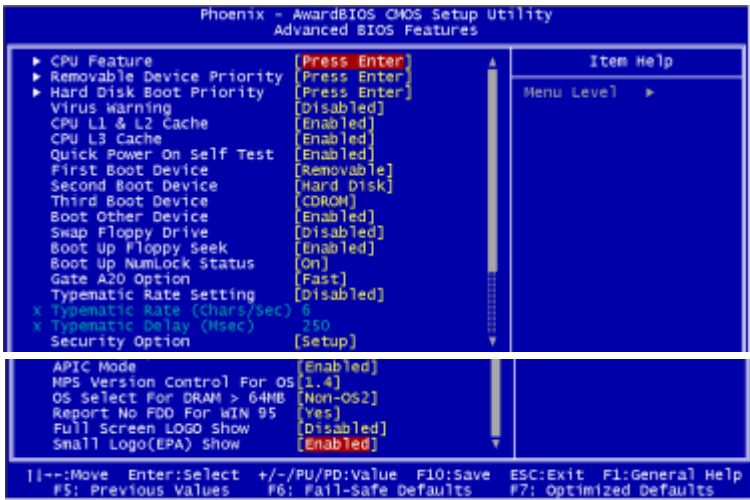

3.3 Standard CMOS Features

When you choose the Standard CMOS Features option from the INITIAL SETUP SCREEN menu, the screen shown below is displayed. This standard Setup Menu allows users to configure system components such as date, time, hard disk drive, floppy drive and display. Once a field is highlighted, on-line help information is displayed in the right box of the Menu screen.

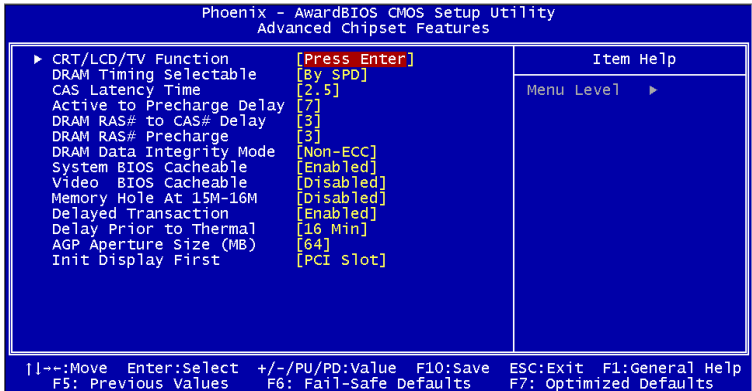

3.4 Advanced BIOS Features

By choosing the Advanced BIOS Features option from the INITIAL SETUP SCREEN menu, the screen below is displayed. This sample screen contains the manufacturer's default values for the PCM-8200

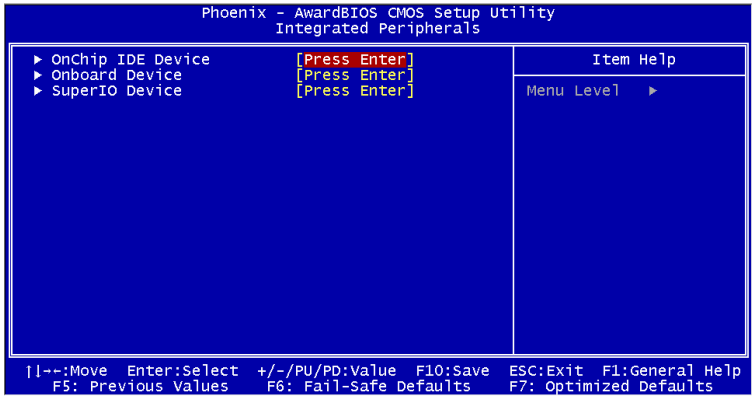

3.5 Advanced Chipset Features

By choosing the Advanced Chipset Features option from the INITIAL SETUP SCREEN menu, the screen below is displayed. This sample screen contains the manufacturer's default values for the PCM-8200.

3.6 Integrated Peripherals

By choosing the Integrated Peripherals from the INITIAL SETUP SCREEN menu, the screen below is displayed. This sample screen contains the manufacturer's default values for the PCM-8200.

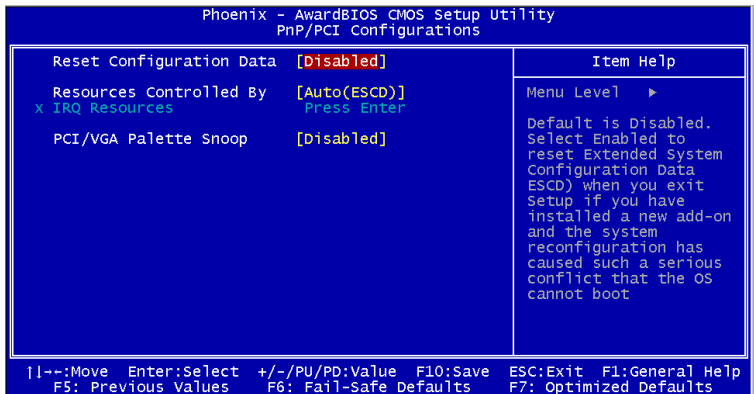

3.7 Power management Setup

By choosing the Power Management Setup from the INITIAL SETUP SCREEN menu, the screen below is displayed. This sample screen contains the manufacturer's default values for the PCM-8200.

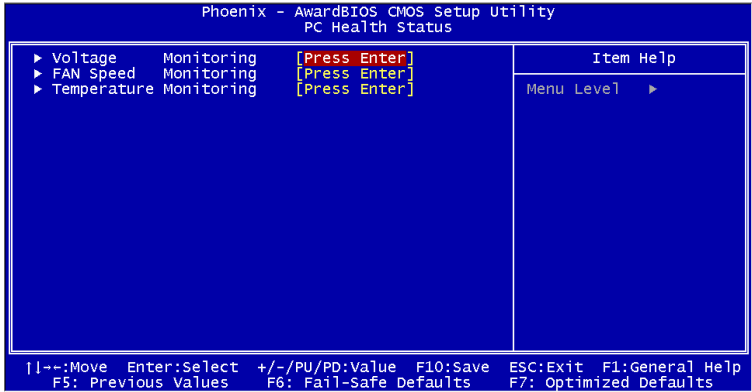

3.8 PnP/PCI configuration

By choosing the PnP/PCI configurations from the Initial Setup Screen menu, the screen below is displayed. This sample screen contains the manufacturer's default values for the PCM-8200.

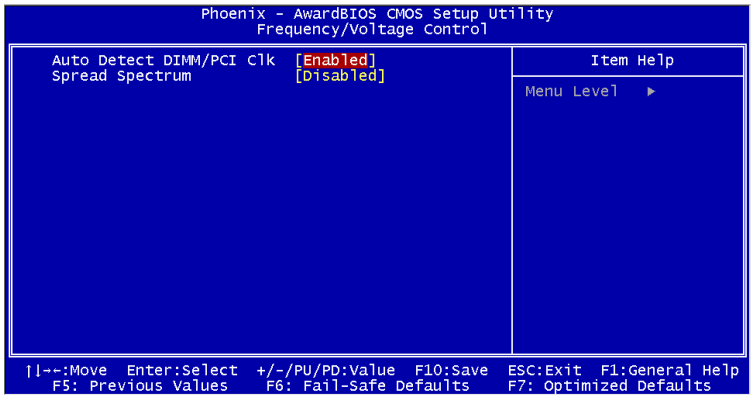

3.9 PC Health Status

By choosing the PC Health Status from the Initial Setup Screen menu, the screen below is displayed. This sample screen contains the manufacturer's default values for the PCM-8200.

3.10 Frequency/Voltage control

By choosing the Frequency/Voltage Control from the Initial Setup Screen menu, the screen below is displayed. This sample screen contains the manufacturer's default values for the PCM-8200.

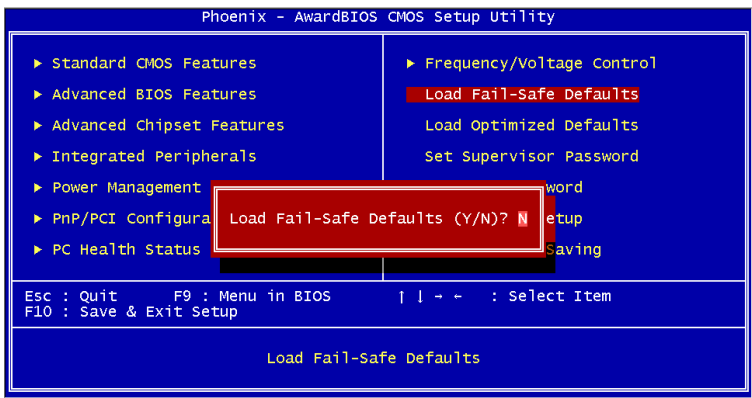

3.11 Load Fail-Safe Defaults

When you press <Enter> on this item you get a confirmation dialog box with a message similar to:

Load Fail-Safe Default (Y/N)?

Pressing "Y" loads the BIOS default values for the most stable, minimal performance system operations.

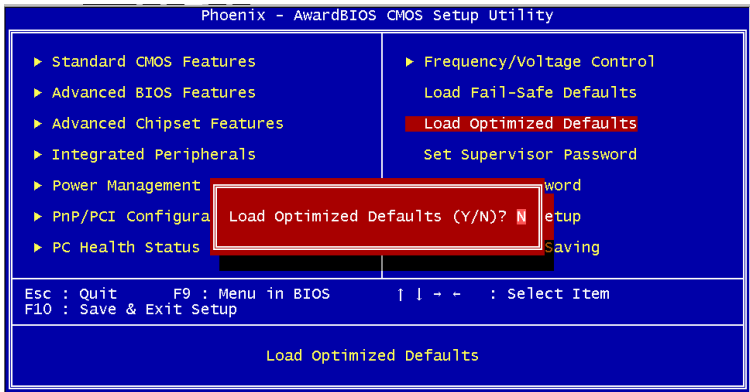

3.12 Load Optimized Defaults

When you press <Enter> on this item you get a confirmation dialog box with a message similar to:

Load Optimized Defaults (Y/N)?

Pressing "Y" loads the default values that are manufacturer's settings for optimal performance system operations.

3.13 Set Supervisor/User Password

You can set either SUPERVISOR or USER PASSWORD, or both of them. The difference between the two is that the supervisor password allows unrestricted access to enter and change the options of the setup menus, while the user password only allows entry to the program, but not modify options.

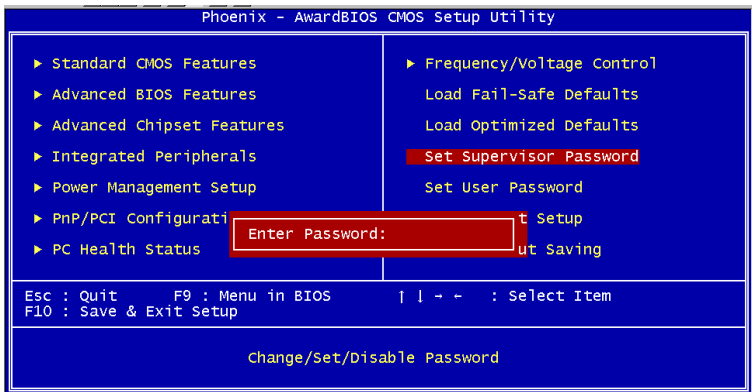

To abort the process at any time, press Esc.

In the Security Option item in the BIOS Features Setup screen, select System or Setup:

System Enter a password each time the system boots and whenever you enter Setup.

Setup Enter a password whenever you enter Setup.

NOTE: To clear the password, simply press Enter when asked to enter a password. Then the password function is disabled.

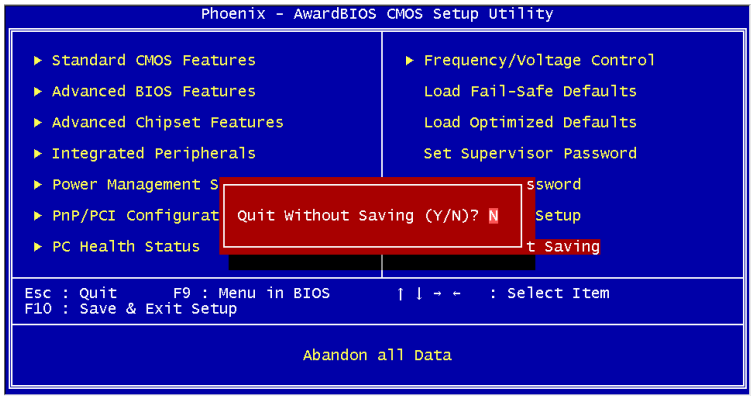

3.14 Save & Exit Setup

If you select this option and press <Enter>, the values entered in the setup utilities will be recorded in the chipset's CMOS memory. The microprocessor will check this every time you turn on your system and compare this to what it finds as it checks the system. This record is required for the system to operate.

3.15 Exit without saving

Selecting this option and pressing <Enter> allows you to exit the Setup program without recording any new value or changing old one.

**Driver
Installation**

OS Support For Microsoft Windows 2000, Windows XP only

The PCM-8200 comes with a CD-ROM that contains most of drivers and utilities of your needs.

Please follow the sequence below to install the drivers:

Step 1 – Install Intel INF Update for Windows 9X-2003

Step 2 – Install Intel Extreme Graphics2 Driver

Step 3 – Install Intel LAN Driver

Step 4 – Install Realtek AC97 codec Driver

USB 2.0 Drivers are available for download using Windows Update for both Windows XP and Windows 2000. For additional information regarding USB 2.0 support in Windows XP and Windows 2000, please visit www.microsoft.com/hwdev/usb/.

Please read instructions below for further detailed installations.

4.1 Installation:

Insert the PCM-8200 CD-ROM into the CD-ROM Drive. And install the drivers from Step 1 to Step 4 in order.

Step 1 – Install Intel INF Update for Windows 9X-2003

1. Click on the **Intel INF Update for Windows 9X-2003** folder and then double click on the **infinst_autol.exe**.
2. Follow the instructions that the window will show you.
3. The system will help you install the driver automatically.

Step 2 – Install Intel Extreme Graphics 2 Driver

1. Click on the **Intel Extreme Graphics 2 Driver** folder and then double click on the **win2k_xp141.exe**.
2. Follow the instructions that the window will show you.
3. The system will help you install the driver automatically.

Step 3 – Install Intel LAN Driver

There're two folders after you enter the Step 3 folder. Based on the board that you purchase, you can install either **Intel LAN 82551er Driver** or **Intel LAN 825xx Driver V8.3**.

Intel LAN 82551er Driver

1. Double click on the **82551ER.exe**. before you key in the path where you want the unzipped files place on and then click on Unzip button.
2. Click on **Start** button **Settings** **Control Panel**
System

3. Select **Device Manager** under the **Hardware** category.
4. Double click on the **Ethernet controller** and select **reinstall Driver** button under the **General** category.
5. Click **Next** twice and tick the **Specify a location** option.
6. Click **Next** and choose a route where you want place the folders on before you click on **open**.
7. Click **Next** **Yes** **Finish** and the window will show you how to finish the installation process.

Intel LAN 825xx Driver V8.3

1. Click on the **Intel LAN 825xx Driver V8.3** folder and then double click on the **pro2kxp.exe**.
2. Follow the instructions that the window will show you.
3. The system will help you install the driver automatically.

Step 4 – Install Realtek AC97 codec Driver

1. Click on the **Realtek AC97 codec Driver** folder and then double click on the **wdm_a355.exe**
2. Follow the instructions that the window will show you.
3. The system will help you install the driver automatically.

DMA Channel	Function
0	Available
1	Available
2	Standard Floppy Disk Controller
3	Available
4	Direct Memory Access Controller
5	Available
6	Available
7	Available

Appendix

B

**Programming the
Watchdog Timer**

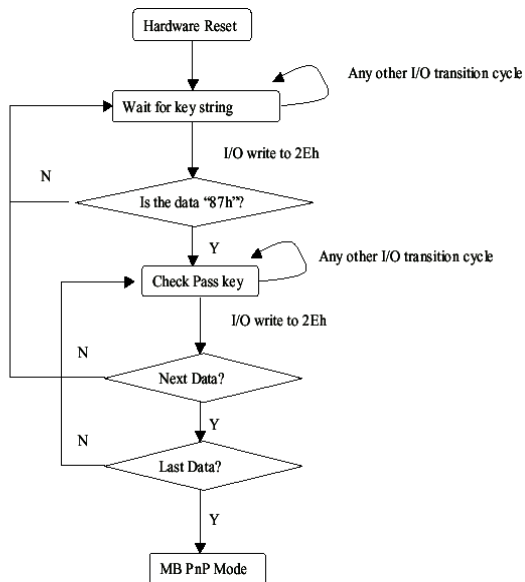

B.1 Programming

PCM-8200 utilizes ITE 8712 chipset as its watchdog timer controller.

Below are the procedures to complete its configuration and the AAEON initial watchdog timer program is also attached based on which you can develop customized program to fit your application.

Configuring Sequence Description

After the hardware reset or power-on reset, the ITE 8712 enters the normal mode with all logical devices disabled except KBC. The initial state (enable bit) of this logical device (KBC) is determined by the state of pin 121 (DTR1#) at the falling edge of the system reset during power-on reset.

There are three steps to complete the configuration setup: (1) Enter the MB PnP Mode; (2) Modify the data of configuration registers; (3) Exit the MB PnP Mode. Undesired result may occur if the MB PnP Mode is not exited normally.

(1) Enter the MB PnP Mode

To enter the MB PnP Mode, four special I/O write operations are to be performed during Wait for Key state. To ensure the initial state of the key-check logic, it is necessary to perform four write operations to the Special Address port (2EH). Two different enter keys are provided to select configuration ports (2Eh/2Fh) of the next step.

	Address Port	Data Port
87h, 01h, 55h, 55h:	2EH	2Fh

(2) Modify the Data of the Registers

All configuration registers can be accessed after entering the MB PnP Mode. Before accessing a selected register, the content of Index 07h must be changed to the LDN to which the register belongs, except some Global registers.

(3) Exit the MB PnP Mode

Set bit 1 of the configure control register (Index=02h) to 1 to exit the MB PnP Mode.

WatchDog Timer Configuration Registers

LDN	Index	R/W	Reset	Configuration Register or Action
All	02H	W	N/A	Configure Control
07H	71H	R/W	00H	WatchDog Timer Control Register
07H	72H	R/W	00H	WatchDog Timer Configuration Register
07H	73H	R/W	00H	WatchDog Timer Time-out Value Register

Configure Control (Index=02h)

This register is write only. Its values are not sticky; that is to say, a hardware reset will automatically clear the bits, and does not require the software to clear them.

Bit	Description
7-2	Reserved
1	Returns to the Wait for Key state. This bit is used when the configuration sequence is completed
0	Resets all logical devices and restores configuration registers to their power-on states.

WatchDog Timer Control Register (Index=71h, Default=00h)

Bit	Description
7	WDT is reset upon a CIR interrupt
6	WDT is reset upon a KBC (mouse) interrupt
5	WDT is reset upon a KBC (keyboard) interrupt
4	WDT is reset upon a read or a write to the Game Port base address
3-2	Reserved
1	Force Time-out. This bit is self-clearing
0	WDT Status
	1: WDT value reaches 0.
	0: WDT value is not 0

WatchDog Timer Configuration Register (Index=72h, Default=00h)

Bit	Description
7	WDT Time-out value select
	1: Second
	0: Minute
6	WDT output through KRST (pulse) enable
5-4	Reserved
3-0	Select the interrupt level ^{Note} for WDT

WatchDog Timer Time-out Value Register (Index=73h, Default=00h)

Bit	Description
7-0	WDT Time-out value 7-0
