Packing List

Before you begin installing your card, please make sure that the following materials have been shipped:

- 9681540I02 (for standard)

  Cable Kit for PFM-541I

       1701160201   VGA cable x 1

       1709100201   USB Cable x 1

       1700060152   Keyboard & Mouse Cable x 1

       1701440350   44-pin IDE Cable x 1

- Product CD
- PFM-541I with Heatsink

Note:

The PFM-541I WiTAS series include the full cable kit because the special cables can be used in rigid environment.

Because of the weight of the heatsink and the mounting design of the heatsink, we strongly suggest you to review the system design:
- Make sure the vibration of the system will not impact the reliability of board.
- If the TF-PFM-541IW2 has to be applied in severely vibrational operating condition, the system level thermal solution will be an alternative to minimize the vibration effect since the heatsink is installed on the chipset.

If any of these items should be missing or damaged, please contact your distributor or sales representative immediately.

Appendix C   Mating Connector

Chapter

1

General Information

1.1 Introduction

AAEON Technology, a leading company in embedded boards manufacturing with a full range of PC/104 CPU Modules, launches a brand new PC/104 CPU Module-PFM-541I. Its compact size and rich functionality ensures the most cost effective and compatible module to coincide with your existing system planning devices.

PFM-541I adopts an AMD Geode LX800 processor that is more cost effective compared to other PC/104 CPU modules on the market. Although PFM-541I is a small board, it offers the full functions customers demand. The chipset of PFM-541I deploys AMD LX800 and CS5536 that makes this board achieve high performance. It features two 10/100Base-TX Ethernet ports, four USB 2.0 ports, four serial ports, one parallel port, watchdog timer and includes one PC/104 socket expansion.

1.2 Features

- Onboard AMD Geode™ LX800 Processor
- AMD Geode™ LX800 + CS5536
- Onboard DDR 333 MHz Memory 256 MB
- 10/100Base-TX Ethernet x 2
- CRT & Up To 24-bit TTL LCD Support
- EIDE x 1, CompactFlash™ x 1
- USB2.0 x 4, COM x 4, Parallel x 1
- PC/104 Expansion
- +5V Only Operation, AT Power Type

1.3 Specifications

System

- Form Factor   PC/104

- CPU   Onboard AMD Geode™ LX 800

- CPU Frequency   500 MHz

- Chipset   AMD Geode™ LX 800 + CS5536

- Memory Type   Onboard DDR333 Memory up to 256 MB

- Max. Memory Capacity   256 MB

- BIOS   Award Plug & Play BIOS - 1 MB ROM

- Wake on LAN   Yes

- Watchdog Timer   255 Levels

- Power Requirement   +5V

- Power Supply Type   AT

- Power Consumption (Typical)   AMD Geode™ LX 800 500 MHz, DDR333 256 MB

  1.83A@+5V

- Dimension (L x W)   3.55" x 3.77" (90mm x 96mm)

PC/104 CPU Module	PFM-541I

- Operating Temperature   32°F ~ 140°F (0°C ~ 60°C)

- Storage Temperature   -40°F ~ 176°F (-40°C ~ 80°C)

- Operating Humidity   0% ~ 90% relative humidity, non-condensing

- MTBF (Hours)   90,000

- Certification   CE/FCC

Display: Supports CRT/LCD Simultaneous and Dual View Display

- VGA/LCD Controller   AMD Geode™ LX 800

- Video Output   CRT, TTL LCD

- Backlight Inverter Supply   —

I/O

- Ethernet   Intel® 82551ER, 10/100Base-TX, RJ-45 x 2

- Audio   —

- USB Port   USB2.0 x 4

- Serial Port   RS-232 x 3, RS-232/422/485 x 1

- Parallel Port   SPP/EPP/ECP x 1

- HDD Interface   UDMA33 x 1

- FDD Interface   —

- SSD   CompactFlash™

- Expansion Slot   PC/104

- PWM LCD Support   —

- DIO   —

- TPM   —

- Touch   —

Quick Installation Guide

Notice:
The Quick Installation Guide is derived from Chapter 2 of user manual. For other chapters and further installation instructions, please refer to the user manual CD-ROM that came with the product.

OZONE SAFE

RECYCLABLE

2.1 Safety Precautions

Warning!

Always completely disconnect the power cord from your board whenever you are working on it. Do not make connections while the power is on, because a sudden rush of power can damage sensitive electronic components.

Caution!

Always ground yourself to remove any static charge before touching the board. Modern electronic devices are very sensitive to static electric charges. Use a grounding wrist strap at all times. Place all electronic components on a static-dissipative surface or in a static-shielded bag when they are not in the chassis

2.5 List of Jumpers

The board has a number of jumpers that allow you to configure your system to suit your application.

The table below shows the function of each of the board's jumpers:

Jumpers

Label	Function
JP1	CFD Master/Slave Selection
JP2	RS-232 Ring/5V Selection
JP3	LCD Clock Selection and Clear COMS

2.6 List of Connectors

The board has a number of connectors that allow you to configure your system to suit your application. The table below shows the function of each board's connectors:

Note: For further information about mating connectors, please refer to the appendix of manual.

Connectors

Label	Function
CN1	Front Panel Connector
CN2	PS2 Keyboard/Mouse Connector
CN3	Option Power Connector
CN4	USB Connectors
CN5	VGA Display Connector
CN6	USB Connectors
CN7	PC104 Connector
CN8	LPT Port Connector
CN9	IDE Connector
CN10	N/A
CN11	N/A
CN12	Power Connector
CN13	N/A
CN14	Ethernet Connector
CN15	LCD Connector
CN16	COM1/2/3/4 Connectors

CN17	Ethernet Connector
BAT1	Battery Connector
CFD1	Type1 Compact Flash Slot

2.7 Setting Jumpers

You configure your card to match the needs of your application by setting jumpers. A jumper is the simplest kind of electric switch. It consists of two metal pins and a small metal clip (often protected by a plastic cover) that slides over the pins to connect them. To "close" a jumper you connect the pins with the clip.

To "open" a jumper you remove the clip. Sometimes a jumper will have three pins, labeled 1, 2 and 3. In this case you would connect either pins 1 and 2 or 2 and 3.

OFF   **ON**   **ON 2-3**
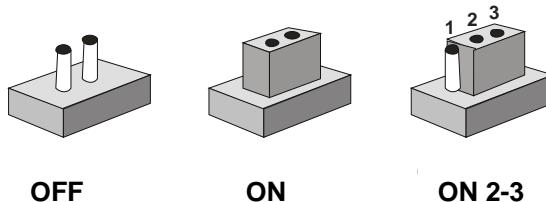

A pair of needle-nose pliers may be helpful when working with jumpers. If you have any doubts about the best hardware configuration for your application, contact your local distributor or sales representative before you make any change. Generally, you simply need a standard cable to make most connections.

2.8 CFD Master/Slave Selection (JP1)

JP1	Function
1-2	Slave
2-3	Master (Default)

2.9 RS-232 Ring/5V Selection (JP2)

JP2	Function
COM1

Award BIOS Setup

3.1   System Test and Initialization

These routines test and initialize board hardware. If the routines encounter an error during the tests, you will either hear a few short beeps or see an error message on the screen. There are two kinds of errors: fatal and non-fatal. The system can usually continue the boot up sequence with non-fatal errors. Non-fatal error messages usually appear on the screen along with the following instructions:

  Press <F1> to RESUME

Write down the message and press the F1 key to continue the boot up sequence.

System configuration verification

These routines check the current system configuration against the values stored in the CMOS memory. If they do not match, the program outputs an error message. You will then need to run the BIOS setup program to set the configuration information in memory.

There are three situations in which you will need to change the CMOS settings:

1.   You are starting your system for the first time

2.   You have changed the hardware attached to your system

3.   The CMOS memory has lost power and the configuration information has been erased.

The PFM-541I CMOS memory has an integral lithium battery backup for data retention. However, you will need to replace the complete unit when it finally runs down.

3.2   Award BIOS Setup

Awards BIOS ROM has a built-in Setup program that allows users to modify the basic system configuration. This type of information is stored in battery-backed CMOS RAM so that it retains the Setup information when the power is turned off.

Entering Setup

Power on the computer and press <Del> immediately. This will allow you to enter Setup.

Standard CMOS Features

Use this menu for basic system configuration. (Date, time, IDE, etc.)

Advanced BIOS Features

Use this menu to set the advanced features available on your system.

Advanced Chipset Features

Use this menu to change the values in the chipset registers and optimize your system performance.

Integrated Peripherals

Use this menu to specify your settings for integrated peripherals. (Primary slave, secondary slave, keyboard, mouse etc.)

Power Management Setup

Use this menu to specify your settings for power management. (HDD power down, power on by ring, KB wake up, etc.)

PnP/PCI Configurations

This entry appears if your system supports PnP/PCI.

PC Health Status

This menu allows you to set the shutdown temperature for your

system.

Frequency/Voltage Control

Use this menu to specify your settings for auto detect DIMM/PCI clock and spread spectrum.

Load Fail-Safe Defaults

Use this menu to load the BIOS default values for the minimal/stable performance for your system to operate.

Load Optimized Defaults

Use this menu to load the BIOS default values that are factory settings for optimal performance system operations. While AWARD has designated the custom BIOS to maximize performance, the factory has the right to change these defaults to meet their needs.

Set Supervisor/User Password

Use this menu to set Supervisor/User Passwords.

Save and Exit Setup

Save CMOS value changes to CMOS and exit setup.

Exit Without Saving

Abandon all CMOS value changes and exit setup.

You can refer to the " AAEON BIOS Item Description.pdf" file in the CD for the meaning of each setting in this chapter.

Chapter

4

Driver
Installation

4.1 Software Drivers

This chapter describes the operation and installation of the display drivers supplied on the Supporting CD-ROM that are shipped with your product. The onboard VGA adapter is based on the AMD LX VGA Flat Panel/CRT controller. This controller offers a large set of extended functions and higher resolutions. The purpose of the enclosed software drivers is to take advantage of the extended features of the AMD LX VGA Flat Panel/CRT controller.

Hardware Configuration

Some of the high-resolution drivers provided in this package will work only in certain system configurations. If a driver does not display correctly, try the following:

1. Change the display controller to CRT-only mode, rather than flat panel or simultaneous display mode. Some high-resolution drivers will display correctly only in CRT mode.

2. If a high-resolution mode does not support your system, try to use a lower-resolution mode. For example, 1024 x 768 mode will not work on some systems, but 800 x 600 mode supports the most.

4.2 Necessary to Know

The instructions in this manual assume that you understand elementary concepts of MS-DOS and the IBM Personal Computer. Before you attempt to install any driver from the *Supporting CD-RO*M, you should:

- Know how to copy files from a CD-ROM to a directory on the hard disk
- Understand the MS-DOS directory structure
  If you are uncertain about any of these concepts, please refer to the DOS or OS/2 user reference guides for more information before you proceed with the installation.

Before you begin

The Supporting CD-ROM contains different drivers for corresponding Windows OS, please choose the specific driver for your Windows OS.

4.3 Installing VGA Driver

Win XP / Win XPe VGA

Place the Driver CD-ROM into your CD-ROM drive and follow the
steps below to install.

1. Click on **Start** button.

2. Click on **Settings** button.

3. Click on **Control Panel** button.

4. Click on **System** button.

5. Select **Hardware** and click on **Device Manager…**.

6. Double click on **Video Controller (VGA Compatible)**.

7. Click on **Update Driver…**.

8. Click on **Next**.

9. Select **Search for a suitable driver…**, then click on **Next**.

10. Select **Specify a location**, then click on **Next**.

11. Click on **Browse**.

12. Select "l**x_win"** file from CD-ROM **(Driver/Step 1 –**

　　　LX_Graphics) then click on **Open**.

13. Click on **OK**.

14. Click on **Next**.

15. Click on **Yes**.

16. Click on **Finish**.

Note: The user must install this system driver before install other
device drivers.

4.4 Installing AES Driver

Win XP / Win XPe Geode LX AES Crypto

Place the Driver CD-ROM into your CD-ROM drive and follow the

steps below to install.

1. Click on **Start** button.

2. Click on **Settings** button.

3. Click on **Control Panel** button.

4. Click on **System** button.

5. Select **Hardware** and click on **Device Manager…**.

6. Double click on **Entertainment Encryption/Decryption**

Controller.

7. Click on **Update Driver…**.

8. Click on **Next**.

9. Select **Search for a suitable driver…**, then click on **Next**.

10. Select **Specify a location**, then click on **Next**.

11. Click on **Browse**.

12. Select **"GeodeLX_XP_WDM_AES_v2.01.00"** file from

   CD-ROM **(Driver/Step 2 – AES)** then click on **Open**.

13. Click on **OK**.

14. Click on **Next**.

15. Click on **Yes**.

16. Click on **Finish**.

4.5 Installing PCI to ISA Bridge Driver

Win XP / Win XPe System

Place the Driver CD-ROM into your CD-ROM drive and follow the

steps below to install.

1. Click on **Start** button.

2. Click on **Settings** button.

3. Click on **Control Panel** button.

4. Click on **System** button.

5. Select **Hardware** and click on **Device Manager…**.

6. Double click on **Other PCI Bridge Device**

7. Click on **Update Driver…**.

8. Click on **Next**.

9. Select **Search for a suitable driver…**, then click on **Next**.

10. Select **Specify a location**, then click on **Next**.

11. Click on **Browse**.

12. Select "**Ite**" file from CD-ROM **(Driver/Step 3 – PCI to ISA
    Bridge)** then click on **open**.

13. Click on **OK**.

14. Click on **Next**.

15. Click on **Finish**.

4.6 Installing Ethernet Driver

Place the Driver CD-ROM into your CD-ROM drive and follow the steps below to install.

1. Click on **Start** button.
2. Click on **Settings** button.
3. Click on **Control Panel** button.
4. Click on **System** button.
5. Select **Hardware** and click on **Device Manager…**.
6. Double click on **Ethernet Controller**.
7. Click on **Update Driver…**.
8. Click on **Next**.
9. Select **Search for a suitable driver…**, then click on **Next**.
10. Select **Specify a location**, then click on **Next**.
11. Click on **Browse**.
12. Select **"**Select "**Intel 82551ER Driver**" folder from CD-ROM (**Driver/Step 4 - Intel LAN driver**) then click on **Open**.
13. Click on **OK**.
14. Click on **Next**.
15. Click on **Yes**.
16. Click on **Finish**

Appendix

A

Programming the Watchdog Timer

A.1 Programming

PFM-541I utilizes SCH3114-NU chipset as its watchdog timer controller.

The SCH311X WDT (Watch Dog Timer) has a programmable time-out ranging from 1 to 255 minutes with one minute resolution, or 1 to 255 second resolution. The unit of the WDT timeout value are selected via bit[7] of the WDT_TIMEOUT register. The WDT time-out value is set through the WDT_VAL Runtime register. Setting The WDT_VAL register to 0x00 disables the WDT function (this is its power on default).

Setting the WDT_VAL to any other non-zero value will cause the WDT to reload and begin counting down from the value loaded. When the WDT count value reaches zero the counter stops and sets the Watchdog time-out status bit in the WDT_CTRL Runtime register. Note: Regardless of the current state of the WDT, the WDT time-out status bit can be directly set or cleared by the Host CPU.

The related register for configuring WDT is list as follows:

NAME	REG OFFSET (HEX)	DESCRIPTION
GP60 Default = 0x01 on VTR POR	47 (R/W)	General Purpose I/O bit 6.0 Bit[0] In/Out : =1 Input, =0 Output Bit[1] Polarity ; =1 Invert, =0 No Invert Bit[3:2] Alternate Function Select 11=WDT 10=Either Edge Triggered Interrupt Input 4 (Note 26.20) 01=LED1 00=GPIO Bits[6:4] Reserved Bit[7] Output Type Select 1=Open Drain 0=Push Pull

WDT_TIME_OUT Default = 0x00 on VCC POR, VTR POR, and PCI Reset	65 (R/W)	Watch-dog Timeout Bit[0] Reserved Bit[1] Reserved Bits[6:2] Reserved, = 00000 Bit[7] WDT Time-out Value Units Select = 0 Minutes (default) = 1 Seconds
WDT_VAL Default = 0x00 on VCC POR, VTR POR, and PCI Reset	66 (R/W)	Watch-dog Timer Time-out Value Binary coded, units = minutes (default) or seconds, selectable via Bit[7] of WDT_TIME_OUT register (0x52). 0x00 Time out disabled 0x01 Time-out = 1 minute (second) .... 0xFF Time-out = 255 minutes (seconds)

NAME	REG OFFSET (HEX)	DESCRIPTION
WDT_CFG Default = 0x00 on VCC POR, VTR POR, and PCI Reset	67 (R/W)	Watch-dog timer Configuration Bit[0] Reserved Bit[1] Keyboard Enable =1 WDT is reset upon a Keyboard Interrupt. =0 WDT is not affected by Keyboard interrupts. Bit[2] Mouse Enable =1 WDT is reset upon a Mouse interrupt. =0 WDT is not affected by Mouse interrupts. Bit[3] Reserved Bits[7:4] WDT Interrupt Mapping 1111 = IRQ15 .... 0011 = IRQ3 0010 = IRQ2 (Note) 0001 = IRQ1 0000 = Disable Note: IRQ2 is used for generating SMI events via the serial IRQ's stream. The WDT should not be configured for IRQ2 if the IRQ2 slot is enabled for generating an SMI event.
WDT_CTRL Default = 0x00 on VCC POR and VTR POR Default = 0000000xb on PCI Reset Note: Bit[0] is not cleared by PCI Reset	68 (R/W) Bit[2] is Write-Only	Watch-dog timer Control Bit[0] Watch-dog Status Bit, R/W =1 WD timeout occurred =0 WD timer counting Bit[1] Reserved Bit[2] Force Timeout, W =1 Forces WD timeout event; this bit is self-clearing Bit[3] P20 Force Timeout Enable, R/W = 1 Allows rising edge of P20, from the Keyboard Controller, to force the WD timeout event. A WD timeout event may still be forced by setting the Force Timeout Bit, bit 2. **Note:** If the P20 signal is high when the enable bit is set a WD timeout event will be generated. = 0 P20 activity does not generate the WD timeout event. Note: The P20 signal will remain high for a minimum of 1us and can remain high indefinitely. Therefore, when P20 forced timeouts are enabled, a self- clearing edge-detect circuit is used to generate a signal which is OR'ed with the signal generated by the Force Timeout Bit. Bit[7:4] Reserved. Set to 0

The following is a sample code to set WDT for 3 seconds.

```
;Runtime register I/O base address
SUPERIO_GPIO_PORT        EQU   800h
.MODEL    SMALL
.CODE

begin:
    ;enable WDT
     mov  dx, SUPERIO_GPIO_PORT + 47h
     mov   al, 0Ch
     out    dx, al
    ;WDT_TIME_OUT register
     mov  dx, SUPERIO_GPIO_PORT + 65h
     mov   al, 80h                          ;unit is second
     out    dx, al
    ;WDT_VAL register
     mov   dx, SUPERIO_GPIO_PORT + 66h
     mov   al, 03h                          ;3 seconds
     out    dx, al
     ;exit
     mov   ah,4ch
     int    21h

     END  begin
```

Mating Connector

C.1 List of Mating Connectors and Cables

The table notes mating connectors and available cables.

Connector Label	Function	Mating Connector		Available Cable	AAEON Cable P/N
		Vendor	Model no		
CN1	Front Panel Connector	Neltron	2226A-XX		N/A
CN2	PS2 Keyboard/Mouse Connector	Neltron	2026B--XX	Keyboard & Mouse Cable	1700060152 1700060154*
CN3	Option Power Connector	Dupont	2541-1H		N/A
CN4	USB Connector	Neltron	2026B--XX	USB Cable	1709100201 170910020D *
CN5	VGA Display Connector	Neltron	2026B--XX	CRT Cable	1700160201
CN6	USB Connector	Neltron	2026B--XX	USB Cable	1709100201 170910020D *
CN8	LPT Port Connector	Keentop	1014 Series	Parallel Port Cable	1701260201
CN9	IDE Connector	Keentop	1014 Series	IDE Cable	1701440350
CN12	Power Connector	Ever	2542H-04		N/A
CN14	Ethernet Connector	Keentop	1014 Series	Ethernet Cable	1700100200 1700100209 *
CN15	LCD Connector	HO TIEN	1255H		N/A
CN16	COM1/2/3/4 Connector	Keentop	1014 Series	Serial Port Cable	1701400250
CN17	Ethernet Connector	Keentop	1014 Series	Ethernet Cable	1700100200
BAT1	Battery Connector	HRS	DF14-MS-1.25C		N/A

Note:
The AAEON Cable P/N with " * " sign is for WiTAS series products.
