## IV. Operation Explanation

---

A. Please execute AAEON WATCHDOG based on the location where you install.

B. Initiation Operation Image as this:

### C. Button Function Instruction :

I. Switch on watchdog function

II. Stop watchdog function

III. Hide watchdog software in the system bar

IV. Exit watchdog program

V. About this program

D. You can set up the interval time to let watchdog function monitor your system. There are different interval time options such as 10 sec / 20 sec / 30 sec / 60 sec / 120 sec / 180 sec / 240 sec.

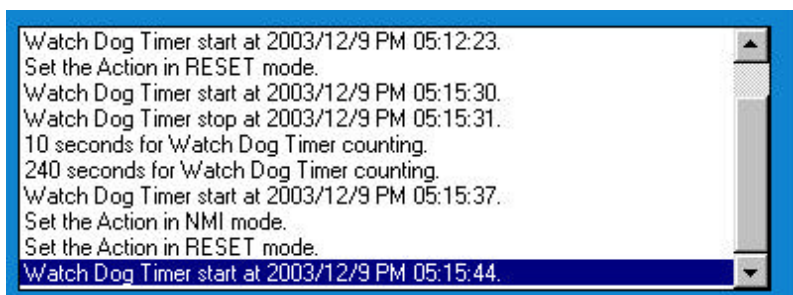

E. You can follow procedure to let your computer restart once the operation system appears no response. There are several alternatives such as

1. Restart
2. Emit NMI signal
3. IRQ 10
4. IRQ 11
5. IRQ 15

- F. You can have a better understanding of every action executed by watchdog software in the message column.

## V. Command Line

---

The program supports command line mode for watchdog active/inactive. We also can use load program with some parameters.

### Command:

Watchdog.exe [/A0|A1] [/S1-S7] [/F1-F5] [/M0|M1]

See as follows:

/A0,/A1	Inactive / Active
/S1 toS7	Port 443 value S1=10   S2=20   S3=30   S4=60   S5=120   S6=180   S7=240
/F1~F5	Action F1=Reset   F2=NMI   F3=IRQ 10   F4=IRQ 11   F5=IRQ 15
/M0,/M1	Start program With Minimize / Without Minimize

Example :

```
Watchdog.exe /a1 /s7 /f1 /m1
```

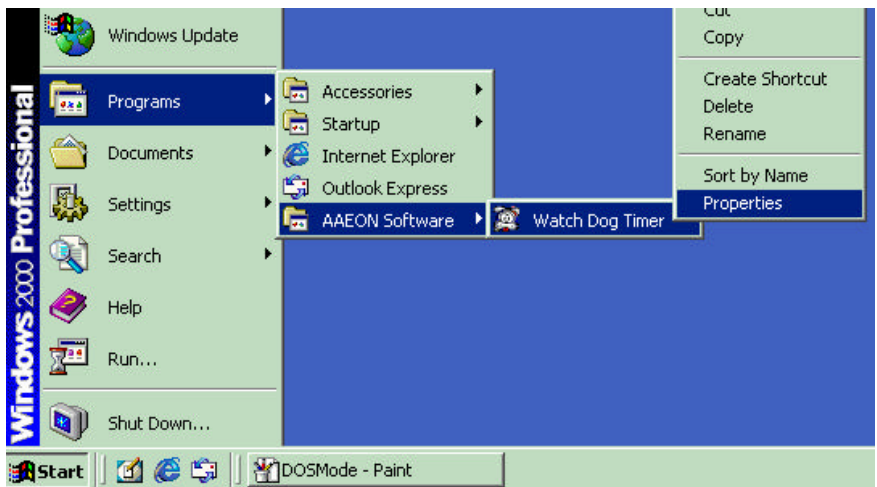

```
Watchdog.exe /M0 /F2
```

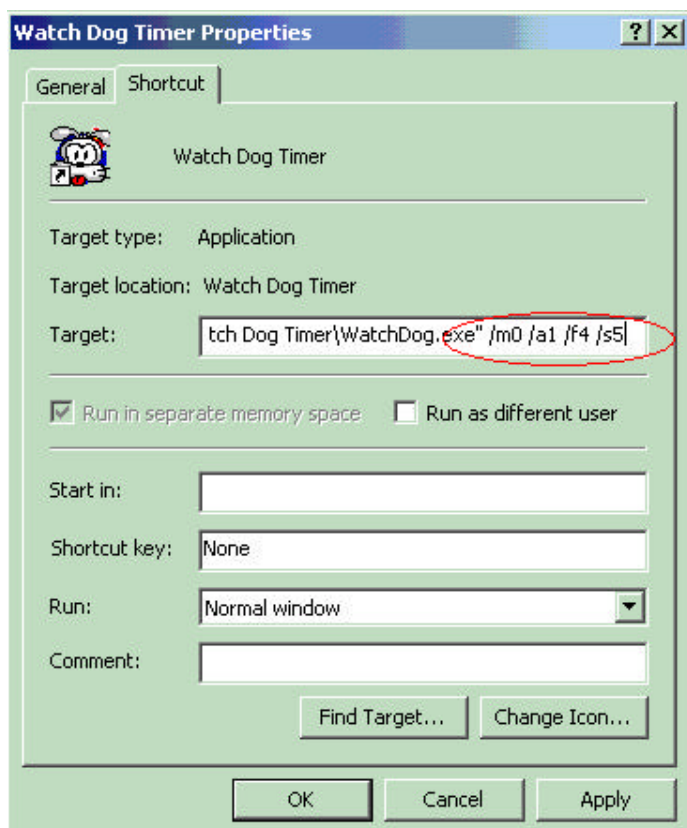

```
Watchdog.exe /s3 /f4
```

If the user doesn't add any parameters, the program will run with “/a0 /s1 /f1 /m1” automatically.

You also can put the parameter to the start menu.

See as follows:

You can start it with the parameters that you want.
