Packing List

Before you begin installing your card, please make sure that the following materials have been shipped:

- 4 M2.5 Screw
- 1 CD-ROM for manual (in PDF format) and drivers
- 1 XTX-CV-A11

If any of these items should be missing or damaged, please contact your distributor or sales representative immediately.

**General
Information**

1.1 Introduction

AAEON, a leading embedded board manufacturer, is pleased to announce the debut of their new generation XTX CPU Module—XTX-CV-A11. The XTX-CV-A11 is a cutting-edge product that provides high performance and low power consumption in the embedded market.

XTX-CV adopts the latest Intel® Atom™ D2550/N2600 processor. The system memory deploys with onboard 204-pin DDR3 800/1066 memory up to 4 GB (D2550: Max. 4 GB; N2600: Max. 2 GB). In addition, Realtek RTL 8105E supports 10/100Base-TX Ethernet that allows network connections. This model applies four PCI-Express[x1], four PCI, one LPC bus, and one SMBus. Moreover, two SATA 3.0Gb/s are configured on the XTX-CV-A11. XTX-CV-A11 also equips six USB2.0 and one parallel port for flexible I/O expansions.

The display of XTX-CV-A11 supports CRT/LCD simultaneous and dual view displays. This brand new XTX CPU Module is developed to cater to the requirements of Automation, Medical, ticket machine, transportation, gaming, KIOSK, and POS/POI applications.

1.2 Features

- Onboard Intel® Atom™ D2550(1.86GHz)/N2600(1.6HGHz) Processor
- Intel® NM10
- SODIMM DDR3 1066 Memory, Max. 4 GB
- 10/100Base-TX Ethernet
- CRT, Up to 24-bit Dual Channel LVDS LCD
- High Definition Audio Interface
- PATA x 1, SATA 3.0Gb/s x 2
- USB2.0 x 6
- PCI-Express[x1] x 4, PCI x 4
- +5V Operating Voltage

- **Power Requirement** Nominal: +5V
- **Board Size** 4.49”(L) x 3.74”(W) (114mm x 95mm)
- **Gross Weight** 0.66 lb (0.3 Kg)
- **Operating
Temperature** 32°F ~ 140°F (0°C ~ 60°C)

- **Storage Temperature** -40°F ~ 176°F (-40°C ~ 85°C)
- **Operating Humidity** 0% ~ 90% relative humidity, non-condensing

Display: Supports CRT/LCD Simultaneous/ dual view displays

- **Chipset** Intel® Atom™ D2550/N2600 processor integrated, includes AVC/H.264, VC1/WMV9, MPEG2 decoder
- **Memory** Shared system memory up to 256MB/ DVMT 4.0
- **Resolution** Up to 1920x1200 for CRT
Up to 1920x1080 for LCD (D2550)
Up to 1600x1200 for LCD (N2600)
- **LCD Interface** Up to 18/24-bit dual-channel LVDS

I/O

- **Storage** SATA 3.0Gb/s x 2, IDE x 1 (shared with SATA)
- **Serial Port** UART x 2
- **USB** USB2.0 x 6
- **Audio** High definition audio
- **Parallel Port** 1

**Quick
Installation
Guide**

2.1 Safety Precautions

Warning!

Always completely disconnect the power cord from your board whenever you are working on it. Do not make connections while the power is on, because a sudden rush of power can damage sensitive electronic components.

Caution!

Always ground yourself to remove any static charge before touching the board. Modern electronic devices are very sensitive to static electric charges. Use a grounding wrist strap at all times. Place all electronic components on a static-dissipative surface or in a static-shielded bag when they are not in the chassis

AMI
BIOS Setup

3.1 System Test and Initialization

These routines test and initialize board hardware. If the routines encounter an error during the tests, you will either hear a few short beeps or see an error message on the screen. There are two kinds of errors: fatal and non-fatal. The system can usually continue the boot up sequence with non-fatal errors.

System configuration verification

These routines check the current system configuration stored in the CMOS memory and BIOS NVRAM. If system configuration is not found or system configuration data error is detected, system will load optimized default and re-boot with this default system configuration automatically.

There are four situations in which you will need to setup system configuration:

1. You are starting your system for the first time
2. You have changed the hardware attached to your system
3. The system configuration is reset by Clear-CMOS jumper
4. The CMOS memory has lost power and the configuration information has been erased.

The XTX-CVA CMOS memory has an integral lithium battery backup for data retention. However, you will need to replace the

complete unit when it finally runs down.

3.2 AMI BIOS Setup

AMI BIOS ROM has a built-in Setup program that allows users to modify the basic system configuration. This type of information is stored in battery-backed CMOS RAM and BIOS NVRAM so that it retains the Setup information when the power is turned off.

Entering Setup

Power on the computer and press or <F2> immediately. This will allow you to enter Setup.

You can install a Supervisor password, and if you install a supervisor password, you can then install a user password. A user password does not provide access to many of the features in the Setup utility.

Install the Password:

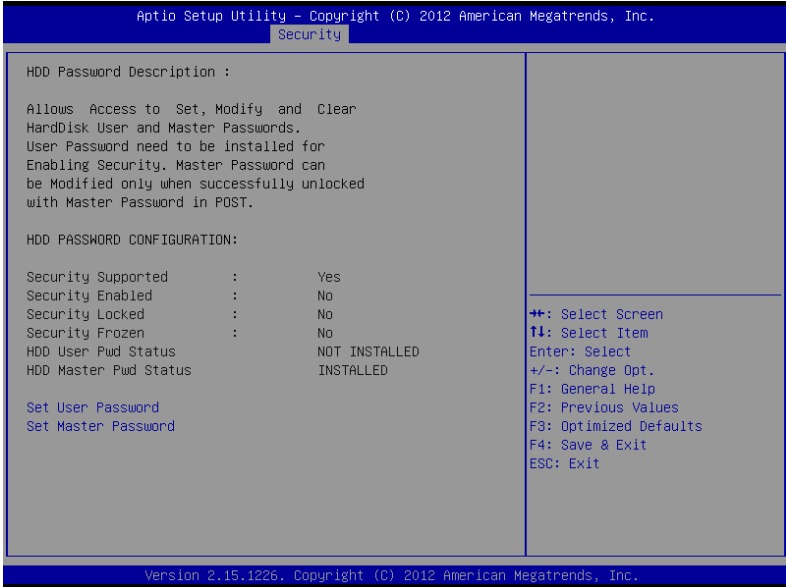

Press Enter on this item, a dialog box appears which lets you enter a password. You can enter no more than six letters or numbers. Press Enter after you have typed in the password. A second dialog box asks you to retype the password for

confirmation. Press Enter after you have retyped it correctly. The password is required at boot time, or when the user enters the Setup utility.

Removing the Password:

Highlight this item and type in the current password. At the next dialog box press Enter to disable password protection.

**Driver
Installation**

The XTX-CV comes with a CD-ROM that contains all drivers your need.

Follow the sequence below to install the drivers:

Step 1 – Install Chipset Driver

Step 2 – Install VGA Driver

Step 3 – Install LAN Driver

Step 4 – Install Audio Driver

Step 5 – Install AHCI Driver

Please read following instructions for detailed installations.

4.1 Installation:

Insert the XTX-CV CD-ROM into the CD-ROM Drive. And install the drivers from Step 1 to Step 6 in order.

Step 1 – Install Chipset Driver

1. Click on the **STEP1 - CHIPSET** folder and select the OS you are currently using, double click on the **.exe** file
2. Follow the instructions that the window shows
3. The system will help you to install the driver automatically

Step 2 – Install VGA Driver

1. Click on the **STEP2 - VGA** folder and select the OS you are currently using, double click on the **.exe** file
2. Follow the instructions that the window shows
3. The system will help you to install the driver automatically

Step 3 – Install LAN Driver

1. Click on the **STEP3 - LAN_RTL8105E** folder and select the OS you are currently using, double click on the **.exe** file
2. Follow the instructions that the window shows
3. The system will help you to install the driver automatically

Step 4 – Install Audio Driver

1. Click on the **STEP4 - AUDIO** folder and select the OS you are currently using, double click on the **.exe** file

2. Follow the instructions that the window shows
3. The system will help you to install the driver automatically

Step 5 – Install AHCI Driver

1. Click on the **STEP5 - AHCI** folder and select the OS you are currently using, double click on the **.exe** file
2. Follow the instructions that the window shows
3. The system will help you to install the driver automatically

C

AHCI Setting

D.1 Setting AHCI

OS installation to setup AHCI Mode.

Step 1: Copy the files below from “Driver CD -> STEP5-AHCI\WINXP_32\F
Install Floppy Create for 32 and 64 bit Windows” to Disk

Step 2: Connect the USB Floppy to the board

Step 3: Setup OS

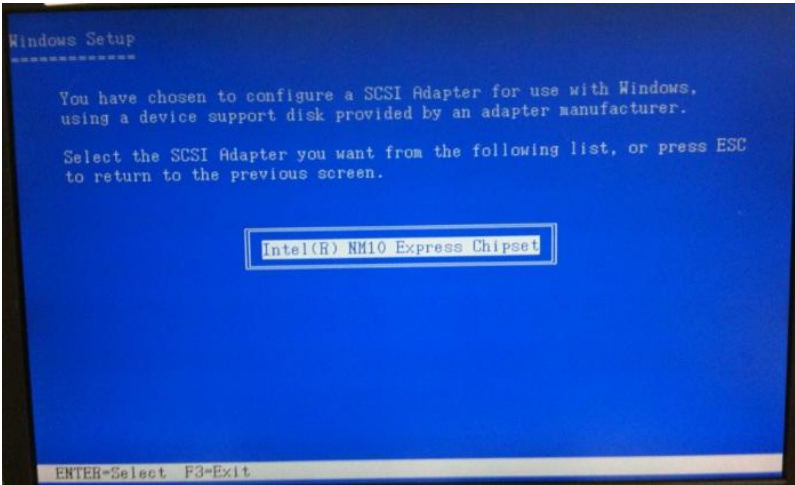

Step 4: Press “F6”

Step 5: Choose “S”

Step 6: Choose “Intel(R) NM10 Express Chipset”

Step 7: It will show the model number you select and then press “ENTER

Step 8: Setup is loading files
